About this Report

1

This Half-year Financial Report contains the Interim Group Management Report and the condensed Half-year Consolidated Financial Statements of Siemens Energy AG and its subsidiaries ("Siemens Energy Group", "Siemens Energy", "the Group", "the Company", "our" or "we") as of March 31, 2025, as well as a Responsibility Statement. It complies with the requirements of Section 115 of the German Securities Trading Act ("Wertpapierhandelsgesetz"). This Half-year Financial Report should be read in conjunction with our Annual Report for fiscal year 2024, which includes a detailed analysis of our operations and activities as well as explanations of financial measures used.

The Half-year Consolidated Financial Statements are prepared in accordance with International Financial Reporting Standards (IFRS) applicable to interim financial reporting as issued by the International Accounting Standards Board (IASB) and as adopted by the European Union (EU).

This document contains statements related to our future business and financial performance and future events or developments involving Siemens Energy, that may constitute forward-looking statements. These statements may be identified by words such as "expect", "look forward to", "anticipate", "intend", "plan", "believe", "seek", "estimate", "will", "project", or words of similar meaning. We may also make forward-looking statements in other reports, prospectuses, presentations, material delivered to shareholders and press releases. In addition, our representatives may from time to time make verbal forward-looking statements. Such statements are based on the current expectations and certain assumptions of Siemens Energy's management, of which many are beyond Siemens Energy's control. These are subject to a number of risks, uncertainties and factors, including, but not limited to those described in disclosures, in particular in the chapters **2.7 Report on expected developments** and **2.8 Report on the internal control and risk management system and material risks and opportunities** of the Annual Report, and the corresponding chapters in the Half-year Financial Report. Should one or more of these risks or uncertainties materialize, should acts of force majeure occur, or should underlying expectations including future events occur at a later date or not at all, or should assumptions not be met, Siemens Energy's actual results, performance, or achievements may (negatively or positively) vary materially from those described explicitly or implicitly in the relevant forward-looking statement. Siemens Energy neither intends, nor assumes any obligation to update or revise these forward-looking statements in light of developments, which differ from those anticipated.

This document includes supplemental financial measures not clearly defined in the applicable financial reporting standards, that are or may be alternative performance measures (non-GAAP-measures). These supplemental financial measures should not be viewed in isolation, or as alternatives to measures of Siemens Energy's net assets and financial positions or results of operations as presented in accordance with the applicable financial reporting framework in its Consolidated Financial Statements. Other companies, that report or describe similarly titled alternative performance measures, may calculate them differently.

The Half-year Consolidated Financial Statements have been prepared and published in millions of euro (€ million). Due to rounding, numbers presented throughout this and other documents, may not add up precisely to the totals provided, and percentages may not precisely reflect the absolute figures.

This document is an English language translation of the German document. In case of discrepancies, the German language document is the sole authoritative and universally valid version.

Interim Group Management Report

Orders

- Favorable trends in the energy market, particularly increasing electricity consumption, have led to rising demand for our products, solutions, and services. This was clearly reflected in the substantial growth in the volume of large orders. As a result, **Siemens Energy**'s orders increased significantly on a comparable basis (excluding currency translation and portfolio effects). The growth rate in the service business outpaced the increase in the new units business significantly, raising the service share of Siemens Energy's orders to 37% (2024: 32%).
- Orders at **Gas Services (GS)** rose sharply. The volume from large orders more than doubled. Orders grew sharply in both the new units and service businesses, with the increase in the new units business being notably stronger.
- Orders at **Grid Technologies (GT)** decreased significantly compared to the prior year. This was primarily due to the lower volume from large orders. While GT's product business achieved moderate growth, orders in the solutions business saw a substantial decline compared to the high prior-year level.
- Orders at **Transformation of Industry (TI)** clearly declined. This was mainly due to the sharp decrease in the volume from large orders. In the prior year, several exceptionally large orders were recorded in the Compression and Industrial Steam Turbines & Generators businesses.
- **Siemens Gamesa (SG)** experienced a substantial increase in orders, as the rise on offshore far outweighed the decline in the onshore area. The offshore growth was primarily driven by a large order in the North Sea worth €1.4 billion, while onshore orders were affected by the follow-on effects from or continuation of the temporary interruption of sales activities for the 4.X and 5.X platforms.
- Siemens Energy's book-to-bill ratio was 1.49 (2024: 1.56). The order backlog reached a new high of €133 billion, compared to €123 billion at the end of the prior fiscal year.
- In geographical terms, sharp and significant growth on a comparable basis in the reporting regions of **Americas** and **Asia, Australia** respectively was accompanied by a moderate decline in **Europe, C.I.S., Middle East, Africa (EMEA)**.
- The development in **EMEA** was driven by the decline in the GT and TI segments. Their regional orders decreased primarily due to the aforementioned reduction in the volume from large orders. In contrast, GS and SG recorded very strong growth in orders, with the aforementioned large order being decisive for SG.
- Growth in **Americas** was based on sharp or substantial increases across all segments. The largest contribution to growth came from GS, followed by GT. The development in the reporting region was determined by demand from the United States, where orders from the country increased by more than half.
- The development in **Asia, Australia** resulted from increases in GS, GT, and TI, which more than offset a sharp decline at SG. GS recorded the highest growth, with its orders in the reporting region increasing by more than half.

Revenue

- **Siemens Energy**'s revenue increased significantly on a comparable basis. All segments contributed to this development, benefiting from both the processing of the high order backlog and the favorable market environment. The increase in the new units business was slightly above the percentage growth in the service business, leaving the distribution of revenue unchanged compared to the prior year.
- **GS** recorded a significant increase, driven by a substantial growth in the service business.
- **GT**'s revenue rose substantially, with increases across all businesses. The highest growth contribution came from the solutions business, followed by a substantial rise in the product business.
- **TI** recorded significant revenue growth, to which all four independent businesses contributed. Compression made by far the largest growth contribution in terms of value, followed by Industrial Steam Turbines & Generators.
- **SG**'s revenue was significantly above the prior year's level. This was primarily due to the new units business in the offshore area, mainly driven by the ramp-up of activities. Revenue in the onshore business also grew significantly.
- In terms of the geographical development of revenue on a comparable basis, there was substantial growth in **EMEA**. **Asia, Australia**, and **Americas** recorded significant and clear growth, respectively.
- In **EMEA**, revenue at GS, GT, and TI grew substantially. SG recorded a clear increase.
- In **Americas**, the increases at GS, TI, and especially GT offset a clear decline at SG.
- The growth in **Asia, Australia** was primarily driven by the sharp increase at SG. Together with the substantial increase at GT, this outweighed the revenue declines at GS and TI.

2.1.2 Profitability

	First half		
(in millions of €, earnings per share in €)	**FY 2025**	**FY 2024**	**Change**

Basic earnings per share	0.73	1.88	(61)%

Profit and Profit before Special items

- The development of **Siemens Energy**’s Profit reflected operational improvements in all segments. This was primarily due to the increased volume and corresponding degression effects, as well as strong operational performance in processing higher-margin orders. Additionally, Profit was positively influenced by one-off effects. The sharp decline in Profit was attributable to the fact that in the prior-year period, there were positive effects totaling €2,049 million related to disposals and the accelerated portfolio transformation of Siemens Energy (reported as Special items in the Strategic portfolio decisions category). In contrast, in the past half-year, expenses of €265 million related to the planned sale of the Indian wind business were incurred, which were also reported as Special items (for further information on this transaction, see **Note 2 in 3.6 Notes to the Half-year Consolidated Financial Statements**). Siemens Energy recorded a sharp increase in Profit before Special items and the corresponding margin.
- Profit at **GS** increased substantially. This was mainly driven by higher revenue in the service business and the margin quality of the processed order backlog. The Profit in both years included in total negligible Special items. As a result, Profit before Special items of GS also increased substantially, with the corresponding margin rising significantly compared to the prior year.
- **GT**’s Profit increased substantially. The largest contribution to the improvement came from the solutions business. Overall, the improvement in Profit was driven by a consistently strong operational performance, increased volume – including corresponding degression effects – and a higher margin of the processed order backlog compared to the prior year. Additionally, there were positive timing effects of around €100 million. Negligible Special items were recorded, whereas the prior-year period had significant positive Special items related to disposals. Consequently, Profit before Special items and the corresponding margin of GT increased sharply.
- Profit at **TI** improved sharply compared to the prior-year period. The largest contribution came from the Compression business, followed by Industrial Steam Turbines & Generators. Overall, the segment’s Profit growth was attributable to increased volume, particularly in the service business, and resulting degression effects, as well as strong operational performance and the comparatively higher margin of the processed order backlog. In both years, insignificant negative Special items were recorded. Profit before Special items and the corresponding margin increased sharply.

Profit margin Transformation of Industry before Special Items

	First half		
	FY 2025	FY 2024	Change
Transformation of Industry	**11.4%**	**7.6%**	**3.7 p.p.**
therein			
Sustainable Energy Systems	(27.2)%	(58.7)%	31.5 p.p.
Electrification, Automation, Digitalization	9.5%	7.7%	1.8 p.p.
Industrial Steam Turbines & Generators	12.4%	9.5%	3.0 p.p.
Compression	13.8%	10.6%	3.2 p.p.

- Profit at **SG** decreased significantly compared to the prior-year period. While there were positive effects due to continued growth in the offshore business – which led to corresponding degression effects – as well as project-related one-off effects, the determining factor for the Profit development were the expenses reported as Special items in connection with the planned sale of the Indian wind business. Additionally, there were ongoing burdens from the follow-on effects of cost increases related to the ramp-up of offshore activities and quality issues in the onshore area. Negative Special items due to restructuring costs were recorded in both reporting periods. However, in the prior-year period, a gain from disposals had led to overall positive Special items. Together, this resulted in a strong improvement in Profit before Special items, with the positive change in the corresponding margin being even more pronounced.
- The item **Reconciliation to Consolidated Financial Statements** includes items that management does not consider to be indicative of the segments’ performance, mainly group management costs (management and corporate functions), other central items, treasury activities as well as eliminations. Other central items include Siemens brand fees, corporate services (e.g., management of the Group’s real estate portfolio), corporate projects, centrally held equity interests, and other items. The negative change in Profit in the Reconciliation to Consolidated Financial Statements compared to the prior-year period was due to a gain from disposal reported as Special items in the prior year.

Net Income (Loss), Basic Earnings per Share

- After a negative Financial result in the prior-year period, a positive Financial result was recorded in the past half-year. This was primarily due to the temporary positive development in the fair values of transaction-related derivatives and interest income from cash investments due to increased cash.
- Nevertheless, the Profit development was largely decisive for Income before income taxes.
- The Group's effective tax rate was 29.5% (H1 FY 2024: 15.4%). It reflects losses without corresponding tax relief at Siemens Gamesa, partially offset by an income tax benefit from the recognition of previously unrecognized deferred tax assets in the United States due to a restructuring related to the integration of Siemens Gamesa.
- As a result of the developments described above, Siemens Energy recorded a sharply declining Net income in the past half-year and correspondingly lower basic earnings per share.

Total liabilities and equity	**54,942**	**50,874**	**8%**

Assets, liabilities and equity

- As of March 31, 2025, **total assets** of the Siemens Energy Group were clearly above the level at the end of the prior fiscal year. The changes on both the assets and liabilities sides primarily reflected the increased business volume and successful business performance of Siemens Energy in the first half-year. The expansionary effect of currency translation differences was of minor importance.
- The sharp increase in **cash and cash equivalents** resulted from positive cash flows from operating activities in the past half-year (see below).
- **Operating net working capital** decreased to negative €5,892 million (September 30, 2024: negative €4,107 million). With the exception of SG, all segments contributed to this development. The largest decrease was recorded by GT, mainly as a result of increased project prepayments in connection with orders. The resulting increase in contract liabilities outweighed the clear increase in inventories, which was largely related to volume growth.
- **Assets classified as held for disposal** and **Liabilities associated with assets classified as held for disposal** increased as a result of the agreement to sell the Indian wind business (see Note 2 in 3.6 Notes to the Half-year Consolidated Financial Statements).

- **Equity** increased significantly compared to the end of the prior fiscal year. This was primarily due to Net income and, in addition, to the positive other comprehensive income.

Cash flows

- In the past half-year, Siemens Energy achieved a sharp year-on-year increase in **Free cash flow pre tax**, despite higher investments. This was due to the operating profit development and the higher cash inflow from the change in operating net working capital, which resulted from an improvement in cash flows in all items, but primarily from the change in contract liabilities and trade and other payables.
- All segments contributed to the higher Free cash flow pre tax. GS made the largest contribution, followed by SG, which sharply reduced its negative Free cash flow pre tax. The increase at GS, GT, and TI was due to improved earnings and cash inflows from the change in operating net working capital. The improvement at SG was primarily due to a year-on-year decrease in cash outflows from the change in operating net working capital, mainly due to contract liabilities related to customer prepayments.
- The change in **cash flows from investing activities** was mainly attributable to the fact that the cash inflows of €2,910 million from disposals and accelerated portfolio transformation in the prior-year period were not offset by any comparable cash inflows in the past half-year.
- **Cash flows from financing activities** showed relatively balanced cash inflows and outflows. In contrast, financing activities in the prior-year period were characterized by a reduction in debt (cash outflow of €1,156 million).
- Siemens Energy's **net cash** – defined as the difference between total debt and total liquidity - amounted to €5,129 million as of March 31, 2025 (September 30, 2024: €2,596 million). This development is almost entirely attributable to the increase in cash and cash equivalents.

	First half

Financing activities	(163)	(1,448)	89%

2.3 Report on expected developments

Due to the positive business development in the first half-year and the strong market demand, Siemens Energy updated the outlook for fiscal year 2025 on April 16, 2025. The change in the outlook is driven by stronger than expected performances at Gas Services, Grid Technologies and Transformation of Industry. Regarding Free cash flow pre tax, the higher outlook is particularly attributable to Gas Services and Grid Technologies, which both experience strong cash inflows driven by customer payments related to strong order momentum. At Siemens Gamesa we continue to work on the measures to reach break-even in fiscal year 2026. We still expect sales activities for the 5.X onshore turbine to resume during fiscal year 2025.

Siemens Energy now expects to achieve comparable revenue growth (excluding currency translation and portfolio effects) in fiscal year 2025 in a range of 13% to 15% (before 8% and 10%) and a Profit margin before Special items between 4% and 6% (before between 3% and 5%). Siemens Energy expects a Net income of up to €1 billion (before around break-even) excluding assumed positive Special items subsequent to the demerger of the energy business from Siemens Limited, India. The outlook for Free cash flow pre tax was already updated on January 27, 2025. After higher-than-expected Free cash flow pre tax in the first quarter of the fiscal year, Siemens Energy expects to exceed the previous outlook for fiscal year 2025 of up to €1 billion. The outlook for Free cash flow pre tax for the fiscal year 2025 is updated to around €4 billion.

The outlook for Siemens Energy does not include charges related to any future legal and regulatory matters.

Amended overall assumptions per business area

- **GS** assumes a comparable revenue growth of 11% to 13% (before 7% to 9%) and a Profit margin before Special items of 11% to 13% (before 10% to 12%).
- **GT** plans to achieve a comparable revenue growth of 24% to 26% (before 23% to 25%) and a Profit margin before Special items between 14% and 16% (before between 10% and 12%).
- **TI** expects a comparable revenue growth of 13% to 15% (before 11% to 13%) and a Profit margin before Special items of 9% to 11% (before 8% to 10%).
- **SG** assumes a comparable revenue growth of 0% to 2% (before negative 9% to negative 5%) and a negative Profit before Special items of around €1.3 billion (unchanged).

2.4 Report on material risks and opportunities

In the reporting period, the overall risk position for Siemens Energy has not changed significantly compared to the risk position presented in our Annual Report for the fiscal year 2024. Additional risks and opportunities not known to us or that we currently consider immaterial could also affect our business operations. At present, no risks have been identified that could endanger the continued existence of our company, either individually or as a whole.

3.6 Notes to Half-year Consolidated Financial Statements

NOTE 1 Basis of presentation

The accompanying Half-year Consolidated Financial Statements as of March 31, 2025, present the operations of Siemens Energy AG with registered office at Otto-Hahn-Ring 6, 81739 Munich, Germany (registry number HRB 252581, local court Munich), and its subsidiaries.

The Half-year Consolidated Financial Statements are in accordance with International Financial Reporting Standards (IFRS) applicable to interim financial reporting as adopted by the European Union (EU). The Half-year Consolidated Financial Statements should be read in conjunction with the Siemens Energy Consolidated Financial Statements as of September 30, 2024. Results for the interim reporting period are not necessarily indicative of future results.

The Half-year Consolidated Financial Statements apply the same accounting principles and practices, including mainly the underlying assumptions and estimation uncertainties, as those used in fiscal year 2024 Consolidated Financial Statements.

Income tax expense in the interim periods is calculated based on the currently expected effective tax rate (ETR) of Siemens Energy for the full year. Siemens Energy AG is subject to the scope of the global minimum taxation (Pillar Two) starting Fiscal Year 2025. According to IAS 12 Income Taxes, Siemens Energy Group did not recognize any potential effects regarding deferred tax assets and liabilities. Effects based on the application of the global minimum taxation are taken into account in the income tax liability. There will probably be no material impact on Siemens Energy Group's ETR.

The Half-year Consolidated Financial Statements have been prepared and published in millions of euros (€ million). Rounding differences may occur in respect of individual amounts or percentages.

The Half-year Consolidated Financial Statements are unaudited and were authorized for issue by the Executive Board on April 30, 2025.

Siemens Energy is one of the largest suppliers of technology in the energy and electricity sector, serving the entire scope of the energy market. It provides a portfolio along the entire energy value chain in both conventional and renewable energy, complemented by a complete set of training and service offerings. This comprehensive portfolio is aimed at public- and private-sector customers along the continuum of energy – from power generation to power transmission and related services.

The reporting structure of Siemens Energy Group consists of the Business Areas **Gas Services** (GS), **Grid Technologies** (GT), **Transformation of Industry** (TI) and our Wind Power business **Siemens Gamesa** (SG) and the Reconciliation to Consolidated Financial Statements. The Business Areas GS, GT and SG represent reportable segments. The Business Area TI comprises four operating but non-reportable segments (Sustainable Energy Systems (SES), Electrification, Automation, Digitalization (EAD), Industrial Steam Turbines & Generators (STG) and Compression (CP)), which are presented voluntarily as if they were a single reportable segment, despite some differences in its economic characteristics.

Certain prior-year figures have been restated. Beginning with fiscal year 2025, SG segment's Real Estate Portfolio, formerly shown under the correspondent segment, is assigned to Reconciliation to Consolidated Financial Statements. Related prior year information has been reclassified to conform to the current year presentation.

NOTE 2 Assets held for disposal

Sale of the Indian wind business

On March 26, 2025, Siemens Energy signed an agreement for the sale of its Indian wind business to Peony Properties Private Limited, which is registered in Mumbai, India, and owned by a group of investors led by TPG. The business includes the manufacturing, installation, and service of onshore wind turbines in India and Sri Lanka. As part of the agreement, Siemens Energy will transfer employees and two manufacturing plants in India to Peony Properties Private Limited. Siemens Energy will hold a 10% interest in the company. Closing of the transaction is expected for the second half of calendar year 2025.

The assets and liabilities associated with the transaction were classified as "held for disposal" as of March 31, 2025. The major classes of assets and liabilities of the disposal group are detailed in the tables below. The measurement of the disposal group at the lower of its carrying amount and fair value less costs to sell resulted in an impairment loss of €240 million as well as a provision for onerous contracts of €25 million, which were both recognized in Other operating expenses in the Consolidated Statements of Income. As of March 31, 2025, the accumulated foreign currency translation loss related to the disposal group recognized in Other comprehensive income (loss), net of income taxes amounted to €159 million.

(in millions of €)	Mar 31, 2025 Indian Wind Business
Cash and cash equivalents	16
Trade and other receivables	76
Contract assets	100
Inventories	88
Remaining assets	67
Total assets	**347**

(in millions of €)	Mar 31, 2025 Indian Wind Business
Trade and other payables	51
Contract liabilities	64
Remaining liabilities	53
Total liabilities	**167**

NOTE 3 Debt

	Current debt		Non-current debt	
(in millions of €)	Mar 31, 2025	Sep 30, 2024	Mar 31, 2025	Sep 30, 2024
Loans from banks	460	64	—	350
Lease liabilities	355	320	1,436	1,437
Notes and bonds	85	80	1,496	1,495
Other financial indebtedness	17	16	6	5
Total debt	**916**	479	**2,938**	3,287

Credit facilities and loans

As of March 31, 2025, and September 30, 2024, Siemens Energy had a €4,000 million syndicated revolving credit facility for general corporate purposes. In the first half of fiscal 2025, the first of two one-year extension options was exercised. The credit facility will now mature in February 2030.

Notes and bonds

As of March 31, 2025 and September 30, 2024, no commercial papers were outstanding under the commercial paper program with a maximum volume of €3,000 million.

NOTE 4 Equity

Treasury shares

The following table presents the development of treasury shares:

	First half	
(in thousands of shares)	FY 2025	FY 2024
Balance at beginning of fiscal year	9,114	7,174
Share buyback	—	10,146
Issuance under share-based payment and employee share programs	(5,341)	(8,138)
Treasury shares, end of first half	**3,774**	**9,183**

NOTE 5 Commitments and contingencies

The following table presents the undiscounted maximum amount for which Siemens Energy was liable under major types of guarantees as at the balance sheet date:

(in millions of €)	Mar 31, 2025	Sep 30, 2024
Guarantees of third-party performance	82	100
Credit guarantees	0	45
Other guarantees	112	63
Total	**194**	**208**

Siemens Energy issues guarantees for third-party performance, which mainly include guarantees of advance payments and performance bonds in consortium arrangements. In the event of a claim under the guarantees, Siemens Energy will be required to pay up to an agreed maximum amount. These agreements typically have terms of up to ten years.

In addition, Siemens Energy issued other guarantees. Those include, among others, indemnifications in connection with the disposal of businesses which are included in the table above with the maximum future payments from these obligations to the extent that future claims are not considered unlikely.

Moreover, Siemens Energy group companies act as partners in commercial partnerships, have equity capital contribution obligations in this function and are jointly and severally liable for the commercial partnerships' liabilities.

Besides that, some subsidiaries abroad have significant potential tax risks that were not recognized in the statement of financial position due to insufficient probability of occurrence. The potential tax risks result from a large number of individual cases involving indirect and direct taxes. Taken individually, the risks are not significant. In total, they amount to a mid three-digit million € range.

Siemens Energy and Siemens Group have agreed to initiate the process to spin off the energy business conducted by Siemens Limited, Mumbai, India, into a separate legal entity with the aim of listing it on the stock exchange in India. Shares in this separate legal entity, Siemens Energy India Limited, Mumbai, India, were transferred to all shareholders of Siemens Limited on April 14, 2025, based on the shareholder structure on April 7, 2025, so that Siemens Energy now holds a 6% share in Siemens Energy India Limited in addition to its 6% share in Siemens Limited. Siemens Energy is obligated to exchange its current 6% share in Siemens Limited for a stake in Siemens Energy India Limited at the then applicable fair value in one or several transactions. In addition, Siemens Energy has the obligation to acquire further shares in Siemens Energy India Limited from Siemens Group in order to achieve a total shareholding of 51%. This is expected to be completed three years after the listing of Siemens Energy India Limited.

NOTE 6 Financial instruments

The following table presents the fair values and the carrying amounts of financial assets and financial liabilities measured at (amortized) cost for which the carrying amounts do not approximate fair value:

	Mar 31, 2025		Sep 30, 2024	
(in millions of €)	Fair value	Carrying amount	Fair value	Carrying amount
Loans from banks	460	460	404	414
Notes and bonds	1,619	1,581	1,612	1,575

The following table allocates financial assets and financial liabilities measured at fair value to the three levels of the fair value hierarchy:

				Mar 31, 2025
(in millions of €)	Level 1	Level 2	Level 3	Total
Financial assets measured at fair value[1]	**—**	**733**	**138**	**871**
Equity instruments measured at fair value through profit or loss	—	7	35	42
Debt instruments measured at fair value through profit or loss	—	—	103	103
Derivative financial instruments	—	727	—	727
thereof not designated in a hedge accounting relationship (including embedded derivatives)	—	*393*	—	*393*
thereof in connection with cash flow hedges	—	*334*	—	*334*
Financial liabilities measured at fair value – Derivative financial instruments[2]	**—**	**602**	**70**	**672**
thereof not designated in a hedge accounting relationship (including embedded derivatives)	—	*324*	*70*	*394*
thereof in connection with cash flow hedges	—	*278*	—	*278*

[1] Reported in line item Other financial assets in the Consolidated Statement of Financial Position.

[2] Reported in line item Other financial liabilities in the Consolidated Statement of Financial Position.

Siemens Energy measures the fair values of derivative financial instruments in accordance with the specific type of instrument. The fair values of foreign currency derivatives are based on forward exchange rates (Level 2). Compensating effects from underlying transactions (e.g., firm commitments and forecast transactions) are not taken into consideration. The fair values of equity and debt instruments measured at fair value are estimated by discounting future cash flows using current market interest rates (Level 3).

The amounts presented in Level 3 include a combined call/put option over 5% of the 6% stake held overall in Siemens Limited, Mumbai, India. The fair value of the option is determined based on the Black-Scholes-Model considering transaction-related conditions. The most significant value-relevant parameter is the share price of Siemens Limited, Mumbai, India. As of March 31, 2025, a 10% increase (decrease) in the share price would result in an increase (decrease) of the negative fair value by €16 million (€16 million).

At inception, the option had an initial negative fair value of €108 million, which was recognized without affecting profit or loss and is subsequently amortized through profit or loss on a pro rata temporis basis, as no option premium was paid. In the first half of fiscal year 2025, an expense of €11 million is recorded in other financial income (expense).

As of March 31, 2025, the negative fair value of the option was €70 million. The unrealized valuation gain of €98 million for the first half of fiscal year 2025 is recorded in other financial income.

Siemens Energy issued guarantees for joint ventures and associates amounting to €45 million as of March 31, 2025 (September 30, 2024: €47 million). Commitments to make capital contributions to associated companies amounted to €44 million as of March 31, 2025 (September 30, 2024: €60 million).

NOTE 9 Subsequent events

The Energy business conducted by Siemens Limited in India was transferred to a new subsidiary of Siemens Group, Siemens Energy India Limited, both registered in Mumbai, India, and shares in Siemens Energy India Limited were transferred to all shareholders of Siemens Limited on April 14, 2025, based on the shareholder structure on April 7, 2025, so that Siemens Energy now holds a 6% share in Siemens Energy India Limited in addition to its 6% share in Siemens Limited. Siemens Energy can exercise significant influence over this investment, but at the same time lost significant influence over Siemens Limited. The investment in Siemens Limited has since been recognized as a financial instrument. The initial measurement at fair value results in a gain in the second half of fiscal year 2025, which is recognized in income from investments accounted for using the equity method.

Additional information

4.1 Responsibility Statement

To the best of our knowledge, and in accordance with the applicable reporting principles, for half-year reporting , the Half-year Consolidated Financial Statements give a true and fair view of the assets, liabilities, financial position, and profit or loss of the Group, and the Interim Group Management Report, includes a fair review of the development and performance of the business and the position of the Group, together with a description of the material opportunities and risks associated with the expected development of the Group for the remaining months of the financial year

4.2 Review Report

To Siemens Energy AG, Munich

We have reviewed the condensed interim consolidated financial statements – comprising the consolidated statements of income, comprehensive income, financial position, cash flows, changes in equity and notes to half-year consolidated financial statements – and the interim group management report of Siemens Energy AG, Munich, for the period from October 1, 2024 to March 31, 2025 that are part of the half-year financial report according to § 115 WpHG ["Wertpapierhandelsgesetz": "German Securities Trading Act"]. The preparation of the condensed interim consolidated financial statements in accordance with International Accounting Standard IAS 34 "Interim Financial Reporting" as adopted by the EU, and of the interim group management report in accordance with the requirements of the WpHG applicable to interim group management reports, is the responsibility of the Company's management. Our responsibility is to issue a report on the condensed interim consolidated financial statements and on the interim group management report based on our review.

We performed our review of the condensed interim consolidated financial statements and the interim group management report in accordance with the German generally accepted standards for the review of financial statements promulgated by the Institut der Wirtschaftsprüfer (IDW) and in supplementary compliance with the International Standard on Review Engagements 2410 "Review of Interim Financial Information Performed by the Independent Auditor of the Entity" (ISRE 2410). Those standards require that we plan and perform the review so that we can preclude through critical evaluation, with a certain level of assurance, that the condensed interim consolidated financial statements have not been prepared, in material respects, in accordance with IAS 34 "Interim Financial Reporting" as adopted by the EU, and that the interim group management report has not been prepared, in material respects, in accordance with the requirements of the WpHG applicable to interim group management reports. A review is limited primarily to inquiries of company employees and analytical assessments and therefore does not provide the assurance attainable in a financial statement audit. Since, in accordance with our engagement, we have not performed a financial statement audit, we cannot issue an auditor's report.

Based on our review, no matters have come to our attention that cause us to presume that the condensed interim consolidated financial statements have not been prepared, in material respects, in accordance with IAS 34 "Interim Financial Reporting" as adopted by the EU, or that the interim group management report has not been prepared, in material respects, in accordance with the requirements of the WpHG applicable to interim group management reports.
