This presentation contains forward-looking statements. Forward-looking statements may include, in particular, statements about future events, future financial performance, plans, strategies, expectations, prospects, competitive environment, regulation and supply and demand. Statements with respect to the future are characterized by the use of words such as "expect", "intend", "plan", "anticipate", "believe", "estimate" and similar terms. Forward-looking statements are based on our current assumptions and forecasts. These statements naturally entail risks and uncertainties, which may cause the actual results of operations, financial position or performance to diverge materially from the estimates given here. Factors that could cause such a divergence include, inter alia, changes in the economic and business environment, fluctuations in exchange rates and interest rates, launches of competing products, poor acceptance of new products or services, and changes in business strategy. Given these uncertainties, readers should not put undue reliance on any forward-looking statements. We undertake no obligation to update or revise any forward-looking statements.

Due to rounding, the sum of percentages of order intake and sales by region as well as by customer industry may vary from 100%.

How do we mitigate the current procurement challenges?

	Facts	Countermeasures
Raw material price inflation	Sharp price increases for carbon and stainless steel as well as other raw materials	Focus on primary suppliers; usage of frame agreements; design-to-cost; ensure cost pass through to customers
Supply chain obstacles	Shortages of supplies (such as semiconductor-based components)	Collaborative planning with the suppliers and increasing security buffer to offset increased lead times
Rising logistic costs	Significant cost increases for freight services	Renegotiation of freight rates; change from air to sea freight; implementation of a GEA wide air freight policy
