423.1	569.2	543.7	702.1

H2 23% YoY MARGIN 55%

€702.1 MN

Consistent H2 performance, in line with our expectations

- H2 net revenue increased 17% YoY (21% on a constant currency basis) driven primarily by expansion with existing customers across regions and verticals.
- EBITDA margin was 55%, reflecting deliberate investment in product and infrastructure.
- Capital expenditure was 5% of net revenue, consistent with our long-term investment goals.

Real-time data-driven decisioning, proven at peak

- Dynamic Identification adds an intelligence layer across trillions of interactions, powering real-time decision-making.
- This new foundational layer also addresses policy abuse and enables emerging models such as agent-led commerce.
- Peak events validate the strength of this new layer, with ~95% of Black Friday Cyber Monday shoppers recognized across online and in-store channels.

From financial products for platforms to Intelligent Money Movement

- Issuing reached an inflection point in 2025, with volumes growing 8x YoY as platforms embedded cards into their core workflows.
- Business accounts and cash management continued to scale, improving access to funds and financial flexibility.
- Adyen now offers enterprise-grade, end-to-end money movement across money-in, money management, and money-out.

A structural advantage where commerce is most complex

FEBRUARY 12, 2026

Dear shareholders,

In the second half of 2025, we continued to execute on the priorities that define Adyen's long-term trajectory: expanding share of wallet with existing customers, onboarding complex enterprise and platform businesses, and investing in the capabilities required to operate global commerce at scale. Consistent with the expectations we set earlier in the year, H2 growth was in line with H1 on a constant currency (CC) basis.

Net revenue reached €1,270.7 million, up 17% YoY (21% on a constant currency basis) for the second half, driven primarily by expansion with existing customers across regions and verticals. EBITDA for H2 was €702.1 million, with an EBITDA margin of 55%, as we continued to invest deliberately in product and infrastructure while maintaining operating discipline.

Looking ahead, two factors increasingly define our differentiation. First, Dynamic Identification adds an intelligence layer to our platform, enabling real-time decisioning that improves conversion, reduces cost, and manages risk with greater precision as our customers scale across channels. Second, our Unified Commerce offering creates a structural advantage that is difficult to replicate at scale. By connecting in-person and digital data on a single platform, we provide a complete, end-to-end view of the customer journey.

Together, these capabilities position Adyen to operate where commerce is most complex and most valuable, accelerating our progress toward becoming one of the largest fintech players in the world.

Evolving our foundation for the next era of commerce

Our ability to solve complex, real-world problems has been anchored in two foundational layers: a single, global tech stack and our own licensed banking infrastructure. Together, they give us direct control and enable us to reduce friction, limit points of failure, and deliver consistent performance globally.

This foundation allows us to serve some of the world's most demanding businesses — large, complex enterprises operating across channels and regions. By building and running the full stack ourselves, we can move funds securely, settle reliably, and scale financial products without intermediaries. In an environment of rising complexity, this level of control remains a core differentiator.

As technology evolves, so must our foundation. While these two layers remain core to our offering, we are building on them to meet the demands of today and tomorrow. Advances in AI, increasingly sophisticated fraud, and the growing misuse of digital systems are exposing the limits of static, document-based approaches to identity and risk. Designed for a different era, traditional controls add friction for legitimate businesses and shoppers, while struggling to prevent abuse at scale.

To address this, we have integrated a third foundational layer: Dynamic Identification. Moving beyond static checks, we designed this layer to draw on trillions of interactions across our online and in-person flows. By embedding this intelligence directly into our stack, we assess risk dynamically and adapt decisions in real time, enabling us to eliminate friction while tightening security with surgical precision.

Dynamic Identification builds on the foundation of our unified payments technology platform and banking licenses, and acts as a core enabler of trusted commerce, increasingly shaping how our products are designed.

Expanding Adyen Uplift

The most immediate impact of Dynamic Identification is visible across our optimization and risk products. It is the intelligence layer that powers Adyen Uplift, enabling decisions that balance conversion, cost, and risk across the full payment flow rather than in isolation.

Building on this foundation, we introduced the newest module within Adyen Uplift in 2025: Personalize. It was developed and validated through pilots with a select group of enterprise customers in the second half of the year, focusing on one of the most common trade-offs merchants face as they scale across channels: how to lower payment costs without negatively impacting conversion.

Lower-cost payment methods are often available, but encouraging shoppers to choose them indiscriminately can increase checkout abandonment and degrade the customer experience. Dynamic Identification allows this trade-off to be managed intelligently. By understanding who the shopper is and how they behave across both online and in-person touchpoints, we can personalize the payment experience in real time, guiding shoppers toward preferred and lower-cost options only when the data indicates they are likely to complete the transaction.

Insights from the H2 pilots¹ demonstrate the value of this adaptive approach. Merchants observed conversion improvements of up to 6%, alongside transaction cost reductions of up to 3%, achieved through personalized optimization rather than static, rule-based, and generic logic.

¹ How Dynamic Identification is transforming the checkout experience

Addressing policy abuse at scale

For our customers, an underestimated share of losses comes not only from traditional payment fraud, but also from policy abuse: repeated exploitation of returns, promotions, and refunds that often appear legitimate in isolation but compound into material cost over time. Without visibility into repeat behavior, merchants are left to rely on manual reviews or broad policy restrictions, increasing friction for legitimate customers while failing to address the underlying problem.

In the second half of 2025, we applied Dynamic Identification to this challenge through targeted pilots with enterprise customers. By linking refund activity at the identity level, rather than viewing transactions in isolation, we were able to surface patterns that had previously remained hidden.

The pilots showed strong engagement, with merchants using these insights on a daily basis, rather than only for ad hoc investigations. More importantly, they reported a step change in confidence: they were able to identify abuse clearly, measure its true scale, and pinpoint its sources. This replaced fragmented, manual processes with shared, data-driven visibility. Capabilities such as identifying top refund contributors at the shopper level were consistently cited as materially reducing investigation time and operational overhead.

This visibility also uncovered significant, previously undetected exposure. One global luxury group identified individual shoppers each receiving up to €5k in refunds, in some cases up to twenty times their average basket value, revealing potential material losses that had gone unnoticed. In another case, a large sports and entertainment customer identified a shopper with roughly 70% of transactions refunded over several years, exposing a long-standing abuse pattern that had not been visible through traditional transaction-level analysis.

These examples illustrate a broader dynamic: while refunds are common and often legitimate, a small subset of shoppers can drive a disproportionate share of losses. We are uniquely positioned to make this behavior visible and actionable as Dynamic Identification allows our customers to intervene precisely and avoid blunt policy changes that negatively impact conversion and trust.

The age of agentic commerce

Looking ahead, Dynamic Identification is also a critical enabler of emerging models such as agentic commerce. As this evolution unfolds over time, traditional identity signals are likely to fall away. Transactions initiated by agents will require new trust frameworks, relying on infrastructure, behavioral context, and adaptive risk models rather than direct human interaction.

In H2, we focused on understanding our customers' needs and how we can best build to meet them. We held extensive conversations with enterprise merchants across retail, luxury, travel, entertainment, and platforms to understand both their ambitions and their concerns. While merchants see clear potential in agent-led commerce, they are equally clear about what must not change: ownership of the customer relationship, control over payments and data, and confidence that new channels can be adopted without introducing new risk.

These needs of our customers directly shape our approach. Rather than building isolated agent experiences, we are extending our existing platform so that agent-initiated transactions become another channel within a merchant's existing workflows, governed by the same principles of control, security, and interoperability. Dynamic Identification plays a central role here, enabling verifiable

shopper intent, adaptive authentication, and identity-informed risk decisions even when a human is no longer directly in the loop.

Alongside this merchant-led work,² we deepened our engagement with the broader ecosystem by collaborating with partners including OpenAI, Google, Cloudflare, Visa, and Mastercard, and joining the Agentic AI Foundation.³ Together, we are contributing to the development of open standards that allow agent-led commerce to scale safely and interoperably, without locking merchants into closed systems or fragmenting the ecosystem.

Across these use cases, Dynamic Identification consistently converts intelligence into measurable revenue growth, cost savings, and operational efficiency.

² Building a merchant-first foundation for agentic commerce

³ Adyen joins the Agentic AI Foundation

CASE STUDY

Personalize: checkout optimization in action

Early results from pilots conducted in H2 2025 show how adaptive checkout optimization delivers measurable improvements across both conversion and payment costs. Rather than forcing businesses to choose between customer experience and efficiency, these pilots demonstrate that the two can be advanced in parallel.

Across industries, businesses achieved conversion uplifts of up to 6% alongside payment cost reductions of up to 3%, driven by real-time optimization at checkout instead of static, rule-based logic. This shows how adaptive decisioning at the moment of purchase translates directly into performance gains.

The impact was visible early on. Mobility provider Hoppy realized 2% payment cost savings while maintaining a locally relevant checkout experience as it expanded into new cities. By dynamically

prioritizing the payment methods riders were most likely to use, while favoring cost-efficient options where possible, Hoppy protected margins without compromising conversion.

Together, these results show how moving beyond static checkout logic enables businesses to better align shopper preferences with cost-efficient payment methods, turning checkout into a scalable driver of growth and profitability.

This is the power of Dynamic Identification: translating real-time intelligence into decisions that drive tangible results.

Unified Commerce engineered for peak moments

One of our foundational advantages is rooted in Unified Commerce (UC). While many providers treat in-person payments as a separate business line, we view the physical point of sale as a critical source of intelligence. By unifying physical and digital environments, we capture a complete view of the customer journey, turning every in-person interaction into actionable data that strengthens our ecosystem. In practice, UC is not just about connectivity, but about performance, intelligence, and control at the moments that matter most.

Success in modern commerce depends on real-time recognition. By operating one platform, merchants don't just process transactions; they recognize shoppers consistently across channels using shared identity and infrastructure. This allows them to act on that data instantly, whether that means personalizing an offer or streamlining a checkout, even during the most intense peak trading moments.

During the Black Friday Cyber Monday (BFCM) weekend, we processed 837 million transactions across online and in-store channels, while maintaining 99.9999% uptime and recognizing nearly 95% of approximately 400 million unique shoppers in real time. These moments expose whether payment providers can maintain performance and reliability when volume, complexity, and operational pressure peak simultaneously.

The data also highlights the continued importance of physical retail within an increasingly omnichannel customer journey. During BFCM, in-store average basket values were 28% higher than online. Commerce at scale is also increasingly global: peak transaction volumes compared to a typical Friday increased 2.8x in the United States, 4.5x in Spain, and 6.1x in Denmark, reflecting growing cross-border and multi-market demand.⁴

This global peak performance is the result of ongoing deliberate focus on providing best-in-class in-person payments. In H2, we expanded our in-person payment (IPP) capabilities with the launch of two new terminals, the S1E4 Pro and S1F4 Pro, built for high-traffic environments and fully integrated with merchants' online operations. This is what makes our UC offering unique: performance at the point of sale is engineered into the platform, not added as an extension.

The UC foundation that proves itself during peak moments continues to support customers year-round, across industries. In H2, we announced the expansion of our partnership with LVMH⁵ to support a more unified in-store and online experience across its "Maisons," where reliability and shopper recognition are critical at scale. We further deepened our work with Lufthansa,⁶ extending unified payments across reservations, onboard, and airport touchpoints to support complex global journeys. We also partnered with Uber to launch "Tap to Ride" airport kiosks, powered by Adyen terminals, enabling travelers to book rides instantly upon arrival without relying on mobile connectivity.

Across these verticals, the pattern is consistent: when digital and physical commerce converge, performance at the point of sale becomes a multiplier for scale. Unified Commerce enables Adyen to perform in the most demanding moments of global commerce, and compound that advantage across the platform long after peak moments pass.

⁴ Adyen Processes Record \$43 billion as Black Friday/Cyber Monday Weekend

⁵ Adyen, partner of LVMH, redefines payments in the global luxury sector

⁶ Adyen Powers Lufthansa Group with Seamless Global Payments

CASE STUDY

Rolling out Starbucks' in-store payments at speed and scale

Our partnership with Starbucks demonstrates how Adyen supports high-traffic environments and complex, multi-market operations where speed and reliability at the point of sale are critical.

In 2025, Starbucks selected Adyen to power in-store payments across 943 stores in the UK, Austria, and Switzerland, supported by 2,375 Adyen payment terminals. This European rollout builds on an existing partnership with Alsea, Starbucks' licensee, where Adyen already supports Starbucks' payments in Mexico — extending a single, unified platform across regions.

The transition to Adyen's platform was executed at pace and with minimal disruption. Over 900 stores were live in just seven weeks, with up to 125 stores onboarded in a single week, all during business hours. This ensured continuity for customers and store teams. Since going live, Adyen has processed the sale of more than

20 million cups of coffee across these markets, with store partners reporting faster, more intuitive in-store payments.

A core element of this expansion is Adyen's Store and Forward functionality, which enables continued payment acceptance during temporary network outages. Since August 2025, Store and Forward has safeguarded over 45,000 Starbucks transactions that would otherwise have failed due to connectivity issues.

The strength of our unique Unified Commerce offering is reflected in its resilience under peak demand. Together, these capabilities show how Adyen supports uninterrupted commerce even in high-pressure, real-world conditions.

From payments to global financial infrastructure

As our customers scale globally, payments increasingly become the starting point rather than the endpoint of their financial needs. Momentum across issuing, capital, and accounts reflects the expanding role these products play in enabling new revenue streams for platform customers.

In 2025, issuing reached an inflection point, with volumes growing 8x YoY as platforms embedded cards directly into their core workflows. This shift supports a wide range of operational use cases, from supplier payouts to employee expenses, while reducing reliance on external banking relationships.

Growth also accelerated across capital and account products. Capital loan volume more than doubled YoY with over 80% of businesses returning for subsequent loans. Recent launches such as Fresha Capital⁷ and YetiPay⁸ extend these capabilities into vertical SaaS platforms, where fast, embedded financing directly supports business growth.

Alongside this, business accounts and cash management products continued to scale, improving access to funds and increasing financial flexibility. New capabilities gained traction quickly, with CashOut reaching a hundreds-of-millions-of-euros annualized run rate while still in pilot and strong early adoption from customers such as Vagaro.⁹

Together, these products form modular building blocks that enable platforms to manage end-to-end money movement on infrastructure we fully control, bringing acquiring, balances, payouts, and issuing into a single operating environment.

The enterprise opportunity: introducing Intelligent Money Movement

As enterprise customers scale, fragmented money movement becomes a structural constraint. Pay-ins, settlements, and payouts spread across banks, providers, and geographies, limiting visibility and reducing liquidity efficiency. We address this by extending our platform beyond payments to manage the full lifecycle of funds for enterprise customers, using the same integrated foundation that powers our payments capabilities.

Intelligent Money Movement (IMM) brings money-in, money management, and money-out into a single operating environment. By consolidating these flows on our platform, customers reduce fragmentation, gain real-time cash visibility, and improve liquidity efficiency. IMM is not a standalone layer, but an integrated part of the platform, enabling enterprises to manage funds directly at the source rather than across disconnected systems.

We are initially focusing on industries with complex fund flows, including marketplaces, travel, mobility, and insurance, in regions where we operate under our own banking licenses. In these markets, enterprises can rely on a single foundation to orchestrate payments, accounts, and payouts across entities and geographies — for example, collecting customer funds, settling them in real time, holding balances where needed, and paying out sellers or partners through one integrated system.

The scale of this opportunity is reflected in our joint research with Boston Consulting Group.¹⁰ The study shows that the average enterprise manages over 40 bank accounts, five to six banks, and around 12

⁷ Adyen and Fresha Surpass \$5.5 Million in Capital Issued as Global Embedded Finance Expansion Scales to Seven Key Markets

⁸ How YetiPay grew its payment volume by over 400% in 18 months

⁹ Adyen CashOut: Instant payouts for Vagaro's small businesses

¹⁰ Next-Generation Treasury: Adyen and BCG Report Reveals How CFOs Can Turn Money Movement into a Strategic Growth Engine

payment providers, with 48% of CFOs citing data-driven liquidity visibility as their top challenge. Among respondents seeking an integrated solution, 74% want a single system covering the full cash lifecycle, and 88% would consolidate all money management with one provider.

IMM builds on our product suite, which already combines payments, accounts, issuing, and capital. Together, these capabilities reflect a consistent strategy of reducing fragmentation and removing intermediaries to give customers greater control over money movement as they scale. As adoption grows, financial products increasingly reinforce our platform's role as core financial infrastructure for global businesses.

CASE STUDY

Powering Navan's global travel platform

Our partnership with Navan, a global leader in travel and expense management, shows how Adyen's single platform enables international scale. Serving more than 10,000 customers worldwide, including many large enterprise companies, Navan's AI-powered technology helps simplify complex travel programs and manage corporate spending.

As Navan expanded globally, it needed a solution to support card issuing across regions for businesses of all sizes. Navan partnered with Adyen to embed credit card issuing directly into its platform and jointly developed our charge card capabilities. Through one unified integration, Navan launched its issuing offering across the US, EU, and UK. The result is a frictionless, globally consistent card program for its customers.

Because Adyen's financial products are built to work together, Navan could access a full suite of services without fragmentation. Issuing, acquiring, and fund management operate on the same platform, giving it a scalable foundation to deepen product engagement and build long-term customer loyalty.

Navan's issuing volume increased more than 5x throughout H2 while maintaining a 99.9% transaction success rate, with further geographic expansion underway. Beyond corporate card issuing, additional Adyen capabilities provide even more value to customers, including reimbursement business accounts and acquiring for user repayments to their employer. Its use of multiple Adyen solutions demonstrates how our single, interoperable platform can support global growth without added complexity.

Pillar updates

Digital

In H2, Digital net revenue reached €696.1 million, up 10% YoY on a constant currency basis, or 7% YoY on a reported basis. Excluding a single large-volume customer,¹¹ processed volume grew 11% YoY. Including this customer, processed volume declined 1% YoY.

During the half, we observed a more pronounced shift in volumes between pillars compared to the prior year, driven by customers moving to our Unified Commerce pillar.¹² This is in line with our strategy to expand share of wallet across channels over time.

Digital is becoming more diversified, with growth extending beyond traditional e-commerce into financial services and new business models, including segments such as insurance and brokerage platforms. As demand increases among customers for whom speed of money movement matters and e-wallets are becoming the default, visibility and control across the full flow of funds are increasingly critical. This reinforces the relevance of bringing money-in, money management, and money-out together in a single operating environment.

At the same time, many digital-native businesses are expanding into physical interactions as part of their growth. What were once purely online models increasingly require in-person touchpoints, whether to serve merchants, reach customers, or unlock new revenue streams. Our platform enables this transition by allowing digital businesses to add in-person payments without fragmenting their technology stack.

A clear example is iFood. Historically a purely online platform, iFood has expanded into in-store payments through its point of sale solution, Maquinona, powered by Adyen. This enables the company to support restaurants of all sizes with in-store payments, loyalty programs, and financial services, evolving from a food delivery platform into a broader payments facilitator across its ecosystem. Maquinona is scaling rapidly, currently serving 800 venues in São Paulo, with a target of 4,000 locations across Brazil. Similar dynamics are emerging across entertainment and delivery & mobility as companies like Netflix and Uber¹³ experiment with physical experiences.

¹¹ The single large-volume customer was referenced beginning in the Q3 2024 Business Update

¹² Digital includes non-platform merchants that process over 99.5% of their volumes online

¹³ Adyen and Uber Expand Global Partnership to Power New Markets, Launch Uber Kiosks

CASE STUDY

Pioneering new mobility with Uber

Building on more than a decade of successful collaboration first starting in 2012, Adyen continues to serve as a key payments engine supporting Uber's global footprint, which now spans over 70 countries across six continents.

The expanded partnership reflects Uber's growing use of Adyen's global payments platform to enhance performance and offer more alternative payment methods, to support Uber's continued international growth. Notable new territories where Uber is leveraging Adyen's services are United Arab Emirates, Hong Kong, and the Caribbean, along with the expansion of local acquiring in key regions like Japan, Mexico, New Zealand, and Australia, and the adoption of high-growth local payment methods such as Pix in Brazil, AfterPay in Australia and WeChat Pay globally to serve travelers ordering Uber through the WeChat mini app.

Looking ahead, Uber and Adyen will continue to partner on payment innovation, which includes new payment method

integrations and support for new business lines such as Uber kiosks in airports, hotels, and venues globally.

Uber kiosks, powered by Adyen terminals, provide a new, phone-free way to book an Uber — perfect for international visitors arriving without a local data plan. Uber kiosk gives travelers a simple way to request a ride, even if they don't have the Uber app.

Customers can simply walk up to the kiosk, enter their destination, then select the ride type. The kiosk prints a paper receipt with the trip details, making the experience as straightforward as possible. The first kiosk powered by Adyen debuted at LaGuardia Airport (Terminal C), New York, with additional rollouts planned for hotels, ports, and international airports in the coming months.

Unified Commerce

In H2, Unified Commerce (UC) net revenue reached €431.3 million, up 33% YoY on a constant currency basis, or 29% YoY on a reported basis, with processed volume growing 30% YoY. Growth continued to be driven by retail, hospitality, entertainment, and food & beverage — where merchants increasingly require a single platform that supports both online and in-person payments with consistent performance at scale.

In retail and food & beverage, merchants are prioritizing speed, reliability, and flexibility at the point of sale. We continued to expand with customers such as LVMH and Starbucks,¹⁴ supporting both luxury and high-traffic in-person payment experiences. Adoption of mobile solutions accelerated across segments, including continued momentum in Tap to Pay on iPhone, enabling faster and more flexible in-store rollouts.

UC is also extending into more complex and operationally demanding industries. Airlines represent a distinct and growing use case, where payments extend well beyond checkout to support customer journeys across booking, onboard, and airport environments. In an industry long constrained by fragmented and outdated technology, our ability to operate a true single global platform allows airlines to simplify operations, improve resilience, and reach travelers consistently across regions. Recent wins such as Lufthansa and Vietnam Airlines¹⁵ rely on this unified approach to modernize payments infrastructure and support global scale.

Unified Commerce customers processing in multiple regions

Unified Commerce customers processing across channels at scale¹⁶

¹⁴ Starbucks Taps Adyen to Power In-Store Payments Across 940+ European Stores
¹⁵ Vietnam Airlines expands partnership with Adyen
¹⁶ Defined as the number of merchants processing at least €10 million on both POS and ecommerce, with over €50 million in total processed volume in the last 12 months

Across this pillar, our differentiation remains structural: one global platform, shared infrastructure, and continuous innovation that allows merchants to operate seamlessly as digital and physical commerce converge, without the fragmentation that limits scale.

Transacting Unified Commerce terminals

Platforms

In H2, Platforms net revenue reached €143.3 million, up 49% YoY on a constant currency basis, or 45% YoY on a reported basis, supported by strong underlying momentum across the SaaS segment. Processed volume grew 28% YoY, or 54% excluding eBay, reflecting continued strength.

Scale across the platform continued to increase. The number of platform customers processing more than €1 billion annually rose to 31, up from 28 a year ago, while the number of active business customers on Platforms grew to 220K up from 145K a year ago. Transacting terminals increased to 291K, a YoY increase of 43%, highlighting the expanding reach of our embedded offering across geographies, verticals, and use cases.

Platform customers processing over €1 billion

As platforms scale, many are moving beyond embedded online payments to make in-person payments a core part of their proposition. By offering point of sale (POS), mobile acceptance, and integrated terminals alongside software and financial products, platforms can support SMBs across their full operating footprint on a single global platform. In H2, 31% of Platforms volume was on POS, up from 25% one year ago.

For platforms evaluating payment providers, in-person payments are often a decisive factor. Physical interactions remain central to how SMBs operate and grow, whether at a counter, table, clinic, or service location. Platforms increasingly expect their payments partner to support these real-world workflows, not just online transactions.

This is where Adyen’s strength in POS becomes a distinct advantage for platforms themselves. It enables them to deliver a more complete proposition, increase share of wallet, and build deeper, more durable customer relationships.

A strong in-person footprint also drives adoption of financial products. Issuing supports operational spend and supplier payouts tied to in-store activity, accounts improve cash visibility across locations, and capital enables investment in growth, such as new equipment or additional sites, all on the same technical and compliance framework.

Together, these trends reinforce the strength of the Platforms pillar. By combining software, in-person payments, and financial products on infrastructure we fully control, Adyen enables platforms to serve SMBs holistically, online and offline, while reducing complexity and scaling globally over time.

Continued investment in our global team

In the second half of the year, we continued to add capacity selectively, welcoming 203 net new team members, consistent with the pace of hiring from the first half, while maintaining a high bar on quality and culture. Hiring decisions were tightly linked to our strategic roadmap, with increased focus on areas gaining relevance over time, including financial products, alongside targeted reinforcement of our technology and commercial organizations.

Looking ahead, we expect headcount to evolve in a measured way, scaling where there is clear long-term impact and ensuring our teams are equipped to support the next phase of growth.

Discussion of financial results

Net revenue

Net revenue¹⁷ was €1,270.7 million in H2 2025, up 21% YoY on a constant currency basis, or 17% YoY on a reported basis, driven by increased share of wallet with existing customers. For the Full Year (FY) 2025, net revenue was €2,364.2 million, up 21% YoY on a constant currency basis, or 18% YoY on a reported basis.

Net revenue includes €6.6 million of net interest income in H2 2025, up 14% YoY. For FY 2025, net interest income was €12.6 million, up 52% YoY.

Regional net revenue contributions remained consistent, with EMEA contributing 57%, followed by North America at 27%, APAC at 10%, and LATAM landing at 6%.

In the second half of the year, EMEA net revenue increased 17% YoY on both a reported and constant currency basis, driven by increased share of wallet and partially offset by lower market volume growth. North America grew 17% YoY, or 26% on a constant currency basis, supported by ongoing share of wallet gains, though moderated by slower growth from APAC-headquartered online retailers¹⁸ and a weaker U.S. dollar. APAC accelerated slightly to 14% growth YoY, or 22% on a constant currency basis, mostly driven by deepened relationships with our existing customers. LATAM net revenue increased 34% YoY, or 37% on a constant currency basis, driven by share of wallet gains with existing international customers.

For the fourth quarter of 2025, net revenue increased 19% YoY on a constant currency basis and 15% on a reported basis. While reported growth was impacted by foreign currency headwinds, underlying performance was in line with expectations. The difference between Q3 and Q4 constant currency growth rates was driven by settlement timing, and a stronger comparable period in Q4 last year. The stronger Q4 of last year was due to a robust holiday season that was amplified by significant wallet share gains including with some of the aforementioned APAC-based online retailers.

FIGURE 4
Net revenue per region (in EUR millions)

¹⁷ Refer to note 1.1 for further explanation on the non-IFRS measures reported by Adyen.
¹⁸ Net revenue is based on the billing location of our customers, which, for NA, includes APAC-headquartered businesses.

Processed volume

Processed volume was €745.3 billion in H2 2025, up 12% YoY. Excluding a previously referenced single large-volume customer,¹⁹ processed volume was up 19% YoY. For FY 2025, processed volume was €1,394.3 billion, up 8% YoY, or 21% excluding the single large-volume customer.

Take rate increased from last period, landing at 17.1 bps in H2 2025, compared to 16.2 bps in H2 2024 and 16.8 bps in H1 2025, driven by changes in the overall merchant mix.

Operating expenses

Operating expenses were €643.6 million in H2 2025, up 12% from H2 2024. For FY 2025, operating expenses were €1,255.4 million, up 13% YoY.

Employee benefit expenses were €380.1 million in H2 2025, up 7% YoY. For FY 2025, employee benefit expenses were €756.2 million, up 8% YoY. We welcomed 203 net new joiners in H2, which brought us to a total of 4,771 FTEs by the end of the half.

EBITDA

EBITDA was €702.1 million in H2 2025, up 23% YoY. EBITDA margin was 55% in H2 2025, compared to 53% in H2 2024. For FY 2025, EBITDA was €1,245.7 million, up 26% YoY, and EBITDA margin was 53%.

Net income

Net income was €581.6 million in H2 2025, up 13% YoY. We generated finance income of €128.9 million in the period, primarily from our balances at central and commercial banks. For FY 2025, net income was €1,062.5 million, up 15% YoY. Net income growth in 2025 was hindered by the interest rate environment.

CapEx

CapEx¹⁷ was €69.5 million and 5% of net revenue in H2 2025. For FY 2025, CapEx was €116.8 million and 5% of net revenue. The majority of our CapEx is related to our data centers, to support our growth as we scale.

Free cash flow

Free cash flow¹⁷ was €606.8 million in H2 2025, up 22% YoY. Free cash flow conversion ratio was 86%. For FY 2025, free cash flow was €1,081.3 million, up 26% YoY.

¹⁹ The single large-volume customer was referenced beginning in the Q3 2024 Business Update.

Financial Objectives

We are focused on building one of the largest financial technology companies in the world, and realizing this ambition requires a long-term perspective. While the path to get there will not always be linear, we are building a resilient, compounding growth engine designed to perform over time.

As we work towards this ambition, we remain committed to providing clear and transparent expectations to our stakeholders. While we have strong conviction in the long-term direction of our business, our visibility into customer plans, and therefore into our own growth outlook, is most meaningful over a 6 to 12 month horizon.

At our Investor Day in November 2025, we committed to providing annual net revenue guidance at the beginning of each year. This allows us to share the latest information as we shape our outlook for the year ahead together with our customers and teams. Our annual guidance reflects near-term customer priorities, aligned with our strategic building blocks, while we continue to execute against our multi-year strategy.

Based on our current visibility, we expect 2026 net revenue growth of 20 to 22% YoY on a constant currency basis. This outlook is underpinned by a strong pipeline and the continued ramp of our 2025 cohort, providing a solid foundation for the year ahead. We expect market volume growth to remain broadly in line with 2025 levels, reflecting continued macroeconomic uncertainty.

To capture the significant long-term opportunities ahead of us, we believe it is important to continue to invest in the team. We continue to target EBITDA margin above 55% by 2028 as we balance these investments with the operating leverage inherent to our business model. In 2026, we plan to hire 550 to 650 net new team members, primarily across our U.S. teams and global tech hubs; we expect EBITDA margin to remain broadly in line with 2025 as we continue to invest as we scale.

Additionally, we expect to maintain a sustainable capital expenditure level of up to 5% of net revenue in 2026. In summary:

- **Net revenue growth:** We expect 2026 net revenue growth of 20 to 22% YoY on a constant currency basis.
- **EBITDA margin:** We expect to increase EBITDA margin levels to above 55% by 2028; we expect 2026 EBITDA margin to remain broadly in line with 2025.
- **Capital expenditure:** We expect to maintain a sustainable capital expenditure level of up to 5% of our net revenue.

We will broadcast a live video conference hosted by Ingo Uytdehaage (Co-CEO) and Ethan Tandowsky (CFO) to discuss these results at 3pm CET on February 12, 2026. You can follow the livestream at www.adyen.com/ir. A recording will be made available on our investor relations website following the call.

Sincerely,

P.W. van der Does

Co-founder and Co-CEO

CFO

Interim Condensed Consolidated Financial Statements

H2 2025 Adyen N.V.

Consolidated statement of comprehensive income

For the periods ended December 31, 2025 and 2024

(all amounts are in EUR thousands unless otherwise stated)

	Note	H2 2025	H2 2024
Non-interest revenue		1,411,073	1,196,511
Costs incurred from financial institutions		(96,444)	(79,324)
Costs of goods sold		(50,536)	(40,263)
<i>Net non-interest revenue</i>	1	1,264,093	1,076,924
Interest income		11,334	13,944
Interest expense		(4,734)	(8,174)
<i>Net interest income</i>	1	6,600	5,770
Net revenue		1,270,693	1,082,694
Wages and salaries		(329,441)	(308,417)
Social securities and pension costs		(50,616)	(45,259)
Amortization and depreciation	5	(74,937)	(55,221)
Other operating expenses	2	(188,594)	(168,028)
Other income		13	8,195
Income before net finance income and income taxes		627,118	513,964
Finance income	4	128,867	172,929
Finance expense		(4,448)	(4,680)
Other financial results		8,971	2,946
Net finance income		133,390	171,195
<i>Income before income taxes</i>		760,508	685,159
Income taxes		(178,945)	(169,610)
Net income for the period		581,563	515,549
<i>Net income attributable to owners of Adyen N.V.</i>		581,563	515,549
<i>Other comprehensive income/(expense)</i>			
Items that may be reclassified to profit or loss:			
Currency translation adjustments foreign operations		(3,920)	4,184
<i>Other comprehensive income/(expense) for the year</i>		(3,920)	4,184
Total comprehensive income for the period (attributable to owners of Adyen N.V.)		577,643	519,733
Earnings per share (in EUR)			
– Net profit per share - Basic	6	18.46	16.55
– Net profit per share - Diluted	6	18.40	16.49

The accompanying notes are an integral part of these interim condensed consolidated financial statements.

Consolidated balance sheet

As at December 31, 2025 and 2024

(all amounts are in EUR thousands unless otherwise stated)

	Note	December 31, 2025	December 31, 2024
Intangible assets		7,501	8,500
Plant and equipment	5	251,311	207,941
Right-of-use assets		217,668	200,198
Other financial assets at FVPL		3,865	9,486
Contract assets	1.2	3,049	5,959
Deferred tax assets		83,652	105,056
Total non-current assets		567,046	537,140
Inventories		76,959	99,848
Receivables from merchants and financial institutions		561,683	658,854
Trade and other receivables		217,007	132,062
Current income tax receivables		6,625	8,433
Other financial assets at amortized cost		30,128	23,912
Cash and cash equivalents	4	10,797,401	9,965,030

Notes to the interim condensed consolidated financial statements

General information

Adyen N.V. (hereinafter ‘Adyen’, or ‘the Company’) is a licensed Credit Institution by De Nederlandsche Bank (the Dutch Central Bank) and registered in the Netherlands under the company number 34259528. The Credit Institution license includes the ability to provide cross-border services in the European Economic Area. Additionally, Adyen provides services in the United States through its US Federal Foreign Branch licence, and in the United Kingdom through its license to operate as a third country branch by the Prudential Regulatory Authority (PRA) and Financial Conduct Authority (FCA).

Adyen N.V. directly or indirectly owns 100% of the shares of its subsidiaries, and therefore controls all entities included in these interim condensed consolidated financial statements. Adyen shares are traded on Euronext Amsterdam, where the Company is part of the AEX Index and has a credit rating of A-, per S&P rating agency.

All amounts in the notes to the interim condensed consolidated financial statements are stated in thousands of EUR, unless otherwise stated.

In accordance with EU and Dutch regulations on auditor independence, our external auditor, PricewaterhouseCoopers, will reach its maximum permitted term of service following the audit of the financial year 2026. As a result, a new auditor will be appointed for the 2027 financial year. Adyen will provide further details on this process and the proposed appointment in the convocation for the 2026 Annual General Meeting.

Basis of preparation

The interim condensed consolidated financial statements for the period July 1, 2025 to December 31, 2025 have been prepared in line with the accounting and recognition principles included in the Adyen annual consolidated financial statements of 2024, in accordance with International Financial Reporting Standards and IFRS IC interpretations as adopted by the European Union (EU-IFRS). This report should, therefore, be read in conjunction with the 2024 annual consolidated financial statements, as well as our H1 2025 interim condensed consolidated financial statements.

The following periods have been presented for the interim condensed consolidated financial statements ended December 31, 2025:

Interim condensed consolidated financial statements	Current period	Comparative period
Statement of comprehensive income	July 1 - December 31, 2025	July 1 - December 31, 2024
Balance sheet	As at December 31, 2025	As at December 31, 2024
Statement of changes in equity	January 1 - December 31, 2025	January 1 - December 31, 2024
Statement of cash flows	July 1 - December 31, 2025	July 1 - December 31, 2024

Relevant accounting policies

Material and other accounting policies that summarize the measurement basis used, and are relevant to understanding the financial statements, were provided in the annual consolidated financial statements for the year ended December 31, 2024. There were no material accounting policy changes during H2 2025.

Key disclosures

1. Revenue

Net revenue

The Management Board monitors net revenue as a performance indicator. Adyen considers net revenue to provide additional insight to its users to evaluate the nature and financial effects of the business activities in which it engages and the economic environments in which it operates. Net revenue consists of net non-interest revenue and net interest income. Net revenue is a non-IFRS measure – refer to note 1.1 for further explanation on the non-IFRS measures reported by Adyen.

Net revenue	H2 2025	H2 2024
Net non-interest revenue	1,264,093	1,076,924
Net interest income	6,600	5,770
Net revenue	1,270,693	1,082,694

Net non-interest revenue

The company derives non-interest revenue from settling and processing payments, sales of goods such as the sale of point-of-sale (POS) terminals, and other payment specific services. Adyen incurs fees charged by third parties that provide services to enable Adyen's payment processing and acquiring services to merchants, that do not form part of the pass-through settlement fees, which are presented as 'costs incurred from financial institutions'. The non-interest revenue and costs are classified under 'net non-interest revenue'.

The breakdown of the composition of net non-interest revenue, detailing revenue from contracts with customers per type of goods or service is as follows:

Types of goods or services (in EUR'000)	H2 2025	H2 2024
Settlement fees	852,791	717,702
Processing fees	308,848	283,550
Sales of goods	54,017	43,583
Other services	195,417	151,676
Non-interest revenue	1,411,073	1,196,511
Costs incurred from financial institutions	(96,444)	(79,324)
Costs of goods sold	(50,536)	(40,263)
Net non-interest revenue	1,264,093	1,076,924

The breakdown of revenue from contracts with customers based on timing is as follows:

Timing of revenue recognition	H2 2025	H2 2024
Goods and services transferred at a point in time	1,399,339	1,187,993
Services transferred over time	11,734	8,518
Total revenue from contracts with customers	1,411,073	1,196,511

Net interest income

Adyen's financial product offering includes Accounts, in the form of merchant-related funds held in business accounts, and Capital, in the form of loans and advances. Adyen earns interest income on funds held in Accounts, on Capital loans and advances issued. Adyen also earns interest income on the sale of terminals with a financing agreement. Simultaneously, Adyen incurs interest expense related to the deposited funds held in the Accounts. During H2 2025, Adyen earned net interest income of EUR 6,600 (H2 2024: EUR5,770), which mainly relates to the Accounts product offering.

Interest earned on cash balances outside of aforementioned products, are not classified within net interest income but form part of net finance income. Refer to note 4 'Cash and cash equivalents'.

1.1 Non-IFRS financial measures

Non-IFRS financial measures are disclosed in addition to the financial statements. The Management Board monitors these non-IFRS financial measures internally as a performance indicator. Adyen considers these to be important supplemental measures of its performance, primarily because these measures are used widely amongst others in the payments industry as a means of evaluating a company's underlying operating performance. Furthermore, Adyen has provided objectives on several of these non-IFRS measures as described in the 'Financial objectives' section above.

Adyen reports on the following additional financial measures that are directly derived from the consolidated statement of comprehensive income, statement of cash flows and notes:

- **Net revenue:** Net non-interest revenue ("Non-interest revenue" less "Costs incurred from financial institutions" and "Costs of goods sold") and Net interest income on the consolidated statement of comprehensive income;

The following table summarizes Adyen's geographical breakdown of net revenue, based on the billing location as requested by the merchant for the periods indicated.

Net revenue - Geographical breakdown (in EUR '000)	H2 2025	H2 2024
Europe, the Middle East, and Africa (EMEA)	729,667	625,408
North America	341,589	292,075
Asia-Pacific	125,367	109,953
Latin America	74,070	55,258
Total net revenue	1,270,693	1,082,694

Adyen's growth strategy is focused on three commercial pillars: Digital, Unified Commerce, and Platforms. The net revenue breakdown from each pillar is as follows:

Net revenue - Commercial pillar breakdown (in EUR '000)	H2 2025	H2 2024
Digital	696,059	649,385
Unified Commerce	431,333	334,814
Platforms	143,301	98,495
Total net revenue	1,270,693	1,082,694

- **EBITDA:** "Income before net finance income and income taxes" less "Amortization and depreciation" on the consolidated statement of comprehensive income;
- **EBITDA margin:** EBITDA as a percentage of "Net revenue" on the consolidated statement of comprehensive income;

- **CapEx:** Capital expenditures consists of "Purchases of plant and equipment, excluding POS rental terminals" in note 5 and "Capitalization of intangible assets" on the consolidated statement of cash flows;
- **Free cash flow:** EBITDA less CapEx and "Lease payments, excluding interest" on the consolidated statement of cash flows; and
- **Free cash flow conversion ratio:** free cash flow as a percentage of EBITDA.

Refer below to a detailed reconciliation of the non-IFRS financial measure to the most directly reconcilable line item in the Consolidated Financial Statements.

Selected non-IFRS financial measures	H2 2025	H2 2024
Income before net finance income and income taxes	627,118	513,964
Amortization and depreciation	74,937	55,221
EBITDA	702,055	569,185
Net revenue	1,270,693	1,082,694
EBITDA margin (%)	55 %	53 %
Purchases of plant and equipment, excluding POS rental terminals	68,921	47,233
Capitalization of intangible assets	632	1,529
CapEx	69,553	48,762
EBITDA	702,055	569,185
CapEx	(69,553)	(48,762)
Lease payments, excluding interest	(25,645)	(21,186)
Free cash flow	606,857	499,237
Free cash flow	606,857	499,237
EBITDA	702,055	569,185
Free cash flow conversion ratio (%)	86 %	88%

1.2 Long-term merchant contract & contract assets

Adyen capitalizes contract costs relating to multi-year service contracts with its merchants. These costs mainly relate to integration and development fees that are directly incremental to obtain the multi-year contracts and do not represent a separate performance obligation. Adyen will amortize these costs against revenue (settlement fees) on a pro rata basis as the related revenue is recognized.

Management derived its best estimate of the future (net) revenue from expected payments volumes and fees determined in the merchant contract, net of directly attributable costs to fulfil the remaining payment service obligations. The contract assets were not impaired at December 31, 2025 and 2024 as the remaining estimated (net) benefits from the merchant contract exceeded the contract assets balance at year-end.

In 2018, Adyen entered into a long-term contract with eBay for the provision of payment services that resulted in the initial recognition of contract assets settled with a cash advance (monetary component) and issue of warrants (non-monetary component) over Adyen's shares. The non-monetary component was fully amortized as at June 30, 2025, and the warrant reserve in equity was reclassified to retained earnings.

The following table summarizes the movement in the contract assets balance:

Contract assets (in EUR '000)	Non-monetary component*	Other contract assets	Total contract assets
Balance - 1 July, 2024	9,293	3,985	13,278
<i>Movements:</i>			
Additions		1,658	1,658
Amortization for the period	(7,603)	(1,581)	(9,184)
Exchange differences		207	207
Balance - December 31, 2024	1,690	4,269	5,959
Balance - 1 July, 2025	—	3,677	3,677
<i>Movements:</i>			
Additions		1,612	1,612
Amortization for the period	—	(2,246)	(2,246)
Exchange differences	—	6	6
Balance - December 31, 2025	—	3,049	3,049

* The non-monetary component is related to the long-term eBay contract.

2. Other operating expenses

The other operating expenses can be specified as follows:

Other operating expenses (in EUR '000)	H2 2025	H2 2024
Travel and other staff expenses	33,434	31,248
Sales and marketing costs	32,439	29,221
IT costs	30,405	25,937
Advisory costs	21,763	16,466
1% for the UN SDGs	12,709	10,827
Housing costs	10,263	12,593
Contractor costs	9,436	5,729
Office costs	4,185	3,870
Miscellaneous operating expenses	33,960	32,137
Total other operating expenses	188,594	168,028

The increase in contractor and advisory costs is driven by internal projects.

3. Capital management

Adyen's objective in capital management is to safeguard its ability to continue as a going concern. Furthermore, Adyen ensures that it consistently meets regulatory capital requirements.

Capital management (in EUR '000)	31 December 2025	31 December 2024
Share capital	315	315
Share premium	656,873	585,331
Total	657,188	585,646

In 2025, 51,505²⁰ (December 31, 2024: 452,089) additional shares were issued. The additional shares issued were as a result of exercises of options and vesting of shares granted to employees. The number of outstanding ordinary shares as of December 31, 2025 is 31,536,692 (December 31, 2024: 31,485,187) with an absolute nominal value EUR 0.01 per share. The total number of authorized shares as of December 31, 2025 is 80,000,000 (December 31, 2024: 80,000,000).

The following reserves are considered to be non-distributable: legal reserves (in accordance with Dutch Law), share-based payment reserve, warrant reserve, and total comprehensive income for the current period. The total of distributable reserves as at December 31, 2025 amounts to EUR 4,171,753 (December 31, 2024: EUR 3,169,603). The legal reserves restricted for distribution in accordance with Dutch Law as at December 31, 2025 amounts to EUR (57,335) (December 31, 2024: EUR 18,210).

Net income is added to retained earnings reserve and the current dividend approach is to not pay dividends, as retained earnings are used to support and finance the growth strategy.

²⁰ Amounts in this paragraph are not rounded to the nearest thousand, unless indicated in EUR.

4. Cash and cash equivalents

Cash and cash equivalents (in EUR '000)	December 31, 2025	December 31, 2024
Cash held at central banks	7,772,324	7,049,816
Cash held at banks, other than central banks	3,025,077	2,915,214
Total	10,797,401	9,965,030

Cash and cash equivalents consists of "Cash held at central banks" and "Cash held at banks, other than central banks", including merchant-related funds held with Adyen (Accounts). Interest earned on business accounts held with Adyen, and the related interest expense, is recognized using the effective interest rate method and presented as net interest income and thus excluded from net finance income.

The "Cash held at central banks" and "Cash held at banks, other than central banks" excluding funds deposited with Adyen, earned interest in the amount of EUR 93,692 and EUR 35,176 (during the six months ended December 31, 2024: EUR 122,656 and EUR 50,273) respectively during the period, which was recognized in finance income. The decrease is driven by a relatively lower interest rate environment compared to 2024.

Of the "Cash held at banks, other than central banks", EUR 189,065 (December 31, 2024: EUR 112,638) and of the "Cash held at central banks", EUR 183,350 (2024: EUR 120,519) is restricted and is therefore not available for general use by the Company. The restricted cash mainly relates to deposits required under the US Federal Foreign Branch license, Brazilian acquiring license, reserve collateral account with the Bank of England, as well as deposits held as guarantee for leased offices. The restricted cash is readily convertible and therefore classified as cash and cash equivalents.

5. Plant and equipment

Plant and equipment	Computer Hardware and Software	Leasehold Improvements	Other	Total
H2 2024				
Cost	252,250	39,520	14,484	306,254
Accumulated depreciation	(102,810)	(19,273)	(4,017)	(126,100)
Balance - July 1, 2024	149,440	20,247	10,467	180,154
Additions	32,368	15,124	9,938	57,430
Disposals	—	—	—	—
Depreciation for the period	(24,150)	(4,127)	(1,200)	(29,477)
Other changes (e.g. exchange differences)	445	(37)	(574)	(166)
Balance - December 31, 2024	158,103	31,207	18,631	207,941
Cost	284,712	54,664	23,852	363,228
Accumulated depreciation	(126,609)	(23,457)	(5,221)	(155,287)
Balance - December 31, 2024	158,103	31,207	18,631	207,941
H2 2025				
Cost	322,392	54,603	24,596	401,591
Accumulated depreciation	(151,370)	(27,482)	(6,768)	(185,620)
Balance - July 1, 2025	171,022	27,121	17,828	215,971
Additions	61,996	6,428	9,482	77,906
Disposals	(560)	—	—	(560)
Depreciation for the period	(35,262)	(4,843)	(2,077)	(42,182)
Other changes (e.g. exchange differences)	184	69	(77)	176
Balance - December 31, 2025	197,380	28,775	25,156	251,311
Cost	383,530	61,121	33,963	478,614
Accumulated depreciation	(186,150)	(32,346)	(8,807)	(227,303)
Balance - December 31, 2025	197,380	28,775	25,156	251,311

Computer Hardware and Software additions during the six months ended December 31, 2025 mainly relate to servers for data centers and equipment such as laptops for employees. Purchases of plant and equipment excluding POS rental terminals during the period amounted to EUR 68,921 (2024: EUR 47,233).

Adyen did not recognize an impairment loss or reverse any impairment loss on plant and equipment during the six months ended December 31, 2025 and 2024.

6. Share information

Adyen presents basic and diluted earnings per share (EPS) data for its ordinary shares. The calculation of earnings per share is as follows:

- 1) Basic EPS: calculated by dividing the net income attributable to owners of Adyen N.V. by the weighted average number of ordinary shares outstanding during the period.
- 2) Diluted EPS: determined by adjusting the basic EPS for the effects of all potentially dilutive ordinary shares, which in the case of Adyen relates to share options and RSUs granted to employees.

Share information		H2 2025	H2 2024
Net income attributable to owners of Adyen N.V. (in EUR '000)		581,563	515,549
Weighted average number of ordinary shares for the period		31,511,461	31,160,219
Dilutive effect of share plans		99,345	103,764
Weighted average number of ordinary shares for diluted net profit for the period		31,610,806	31,263,983
1)	Net profit per share – basic	18.46	16.55
2)	Net profit per share – diluted	18.40	16.49

7. Events after the balance sheet date

There are no events after the reporting period.

8. Other information

The interim condensed consolidated financial statements for the period July 1, 2025 to December 31, 2025 have been prepared in line with the accounting and recognition principles included in the Adyen annual consolidated financial statements of 2024, in accordance with International Financial Reporting Standards and IFRIC interpretations as endorsed by the European Union (EU-IFRS).

The interim condensed consolidated financial statements are unaudited.
