

Alliant Energy
Q1 2025 Earnings
May 9, 2025

CONFERENCE CALL OPERATOR:

Thank you for holding and welcome to Alliant Energy's first quarter 2025 earnings conference call. At this time, all lines are in a listen-only mode. Today's conference call is being recorded. I would now like to turn the call over to your host, Susan Gille, Investor Relations Manager at Alliant Energy.

Susan Gille:

Good morning. I would like to thank all of you on the call and the web cast for joining us today. We appreciate your participation.

With me here today are Lisa Barton, President and CEO, and Robert Durian, Executive Vice President and CFO. Following prepared remarks by Lisa and Robert we will have time to take questions from the investment community.

We issued a news release last night announcing Alliant Energy's first quarter financial results and reaffirmed our 2025 earnings guidance range. We also updated our capital expenditure and financing plans for years 2025 through 2028. This release, as well as an earnings presentation, will be referenced during today's call, and are available on the investor page of our website at www.alliantenergy.com.

Before we begin, I need to remind you that the remarks we make on this call, and our answers to your questions, include forward-looking statements. These forward-looking statements are subject to risks that could cause actual results to be materially different. Those risks include, among others, matters discussed in Alliant Energy's news release issued last night and in our filings with the Securities and Exchange Commission. We disclaim any obligation to update these forward-looking statements.

At this point, I will turn the call over to Lisa.

LISA BARTON:

Thank you, Sue. Good morning, everyone and thank you for joining us.

20-25 is off to a strong start – I'm pleased to share meaningful progress supporting both our near-term and long-term objectives—clear evidence of the strength, resilience and adaptability of our strategy and business model.

Our first quarter results delivered more than 25 percent of our earnings guidance midpoint – and we are positioned to achieve our 20-25 earnings objectives; while advancing our key strategic priorities, positioning us well for the year.

Our commitment to our customers, communities, investors, and employees remains at the heart of everything we do. As I have mentioned in previous calls, we are relentlessly focused on supporting economic development and growth in our states, and – today - I'm pleased to provide meaningful and exciting updates supporting our development milestones, first quarter achievements and share details on our updated capital expenditure plans, as we advance our growth strategy.

I will then turn the call over to Robert, to provide additional details related to our quarterly financial performance, risk management efforts, as well as our updated financing plans and regulatory matters.

Achieving scalable growth in today's complex environment is akin to solving a Rubik's Cube—it demands precision, agility, and a clear understanding of how every move influences the bigger picture. We are simultaneously solving all sides of our own Rubik's Cube: addressing customer needs, supporting economic development and growth in our states, collaborating with key stakeholders, and delivering sustainable investor returns.

Let me recap our investment growth timeline over the last 6 months. In November, we announced two energy supply agreements with data center companies locating in the Big Cedar Industrial Center in Cedar Rapids, Iowa – adding an initial 1.1 gigawatts of data center demand for what we referred to as the “first phase” at Big Cedar. The corresponding capital plans released last November – represented a 20% increase from the prior year and included the additional capacity resources needed to serve the “first phase” at Big Cedar and to adapt to MISO accreditation changes.

We have continued our strong momentum in support of our economic development efforts this quarter, by

- solidifying the resources needed for a “second phase” for one of our data center customers at Big Cedar -which is an additional 800 megawatts of demand.
- executing a new energy supply agreement with a data center customer in Beaver Dam, Wisconsin, and
- reaching an agreement with one of our Iowa data center customers - to use existing capacity to serve them earlier – increasing our forecasted peak load in 2026 and 2027.

The Alliant Energy Advantage™ is our commitment to help grow the economies in Iowa and Wisconsin and meet the needs of our customers by being as creative and adaptive, as possible to align with their desired timelines.

To summarize our recent success on this front:

- we now have three major data center developments with fully executed ESA's totaling 2.1 gigawatts of demand, which represents a greater than 30 percent increase in our peak demand,
- we're accelerating our load ramp for one of the two data centers at Big Cedar using existing resources, and
- we're pursuing additional growth opportunities, positioning ourselves and our states for meaningful and sustainable long-term growth.

On slide 4, we provide our updated demand projections used to develop our capital expenditure plan. If actual demand exceeds the current estimated demand in our plan, or if we sign additional energy supply agreements, we would serve any incremental load through a combination of existing or new resources, short-term market purchases and/or load response.

To help investors and stakeholders navigate the complexity of growth announcements, we focus our reporting exclusively on customer load supported by fully executed electric service agreements, backed by substantial customer commitments to ensure our growth is highly credible and sustained.

These advancements in economic development and growth have lead to our capex update reflecting a nearly 26% increase from where we were 18 months ago; as shown on slide 5. This translates into a 20-24 to 20-28 forecasted investment CAGR of nearly 11%., with significant energy resource investment opportunities, extending beyond 2028; as profiled on slide 6.

In aggregate - our 4-year capex plan – for 20-25 through 20-28 – increased by approximately 600 million dollars from our November 20-24 update.

The updated resource plan – behind the capex plan - strikes the right balance in

- optimizing existing resources and extending value at existing sites – supporting reliability and affordability,
- utilizing short-term capacity agreements and load response to accelerate economic development, and
- adding new generation to grow alongside our customers - in a responsible manner – allowing us to confidently scale new energy resources.

Our efforts to drive community development and enhance our growth trajectory encompasses data centers, as well as current and prospective commercial and industrial customers.

I am pleased to report that there continues to be strong interest in locating and growing in our service areas - both in Iowa and Wisconsin.

Through disciplined planning and proactive execution, we have positioned our company, customers and investors for success in an uncertain macroeconomic environment. The capital plan update reflects proactive planning and flexibility -

allowing us to lean into new natural gas investments, invest in our existing generation and distribution systems to support resiliency, reliability, and reduce risks, in the face of policy uncertainty.

- New natural gas resources provide reliable and dispatchable capacity resources that complement our robust renewable fleet.
- Investments in our existing generation resources – such as our advance gas projects in WPL; and WPL’s extension of the use of Edgewater and Columbia generation stations until the end of the decade, provides the additional reliability to meet growing demand and is responsive to the evolving MISO resource adequacy requirements.
- Lastly, extending the timing of some renewable and battery investments allows us to reduce risks related to tariff and tax policy uncertainty while also lengthening our capital expenditure plan into the future, strengthening our position to deliver financial consistency over the long-term.

With the energy supply agreements executed for our 3 data center customers, our attention is now focused on obtaining regulatory approval of the individual customer rates - or ICRs.

- The IUC is currently reviewing an ICR contract, filed earlier in the year for one of our data center customers in Iowa
- The second Iowa ICR contract will be filed this quarter, reflecting an accelerated load ramp, and
- Late last month, we filed an ICR contract for the Beaver Dam data center in Wisconsin.

As we have highlighted in previous calls, we are committed to ensuring all ICRs achieve a win-win-win - for existing customers, new customers, and our shareowners - which will be demonstrated in these confidential filings.

New data center loads are expected to boost energy sales. This increase in sales will help distribute fixed costs and transmission expenses across a larger customer base, contributing to more stable and manageable rates for the customers we have the privilege to serve.

Alliant Energy operates in business-friendly states that are well positioned for regional growth and economic development, and we are proud to partner with our communities to turn growth potential into real, long-term impacts. Our collaborative partnership with regulators, policymakers, and local communities enables us to deliver successful outcomes.

I’m proud of our team’s proactive and impactful engagement, which serves as the cornerstone of our success - delivering meaningful outcomes and greater value for all our stakeholders. Alliant Energy is here to support not only the customers we currently serve, but also to ensure we are supporting the needs of future customers and enabling community growth across our service territory.

Before I turn the call over to Robert, I would like tackle head on, questions regarding our strategy, in the event the Inflation Reduction Act – or IRA - was repealed or if tax credits were scaled back.

Renewable generation and energy storage tax credits have fueled economic growth and onshoring. Eliminating the tax credits would – unfortunately, and unnecessarily - increase costs for customers. The delegations in Iowa and Wisconsin understand how valuable tax credits and transferability are to Alliant and our customers, and we believe they will advocate for a balanced, careful approach to any legislative changes.

Iowa's wind resources are among the best in the country and our customers are benefiting from those investments. We will continue to take an 'all of the above' approach in new generation resources, which includes a mix of wind, batteries and natural gas to ensure we maintain a balanced and diverse energy resource mix.

Active management of our capex and resource plans means we have taken the prudent and proactive approach of safe harboring wind and energy storage projects. As a result, 100% of the renewable and energy storage capex in our plan is currently safe harbored through 2028. And, as we continue to execute our strategy, we'll continue to proactively derisk our strategy and remain well positioned to quickly adapt to a dynamic environment.

In closing, I would like to extend my deepest gratitude to our dedicated team of employees for their unwavering commitment to our purpose – serving customers and building stronger communities. Your hard work and dedication are the backbone of our operational success and the driving force behind our strategic progress.

I will now turn the call over to Robert.

ROBERT DURIAN:

Thank you, Lisa. Good morning, everyone.

Yesterday, we announced first quarter 20-25 earnings of 83 cents per share, compared to 62 cents per share in the first quarter of 20-24. Our earnings are ahead of plan despite the negative temperature impacts on electric and gas sales in the first quarter of 20-25.

Our quarter over quarter variances were mainly driven by the higher revenue requirements from capital investments at both IPL and WPL, temperature impacts on retail electric and gas sales, and timing of income tax expense which will reverse later this year. These positive drivers were partially offset by higher depreciation and financing expenses.

Temperatures were warmer than normal in the first quarter of 20-25 resulting in decreased electric and gas margins of 3 cents per share. In comparison, the winter temperatures in the first quarter of 20-24 were some of the warmest on record, which decreased our electric and gas margins by approximately 8 cents per share.

Excluding the impacts of mild temperatures, the margins from our retail electric sales were higher than first quarter of 20-24 due to growth in number of customers and increased use per meter across all retail customer classes at our Wisconsin utility.

To assist you in modeling our quarterly earnings this year, I want to provide some additional context to the variance driver related to the timing of income tax expense. Income tax expense is recorded each quarter based on an estimated annual effective tax rate and the proportion of full year earnings generated each quarter. As shown on slide 9 of our supplemental slides, this causes fluctuations in the amount of tax expenses quarter-over-quarter, but it will not have an impact on full year's earnings.

With a solid first quarter behind us, we are reaffirming our 20-25 earnings guidance range of 3 dollars and 15 cents to 3 dollars and 25 cents per share.

Our ability to consistently deliver solid financial results is supported by our efforts to provide customer value, including extending the value of existing energy resources, making smart investments and controlling operating costs, all while receiving constructive regulatory outcomes.

I am proud to share how our employees are continuing their steadfast focus on creating value for our customers while managing risks. The following are some recent examples of their success:

- Reiterating what Lisa shared - We have completed nearly all of our planned safe harbor activities with the intention of preserving the qualification of tax credits for future energy storage and renewable projects expected to be placed into service through 20-28.
- Our team has done a great job mitigating tariff exposure for our customers – with minimal exposure on the batteries in our updated capital plan as the batteries are either in our possession or in-transit; and the batteries in-transit are expected to be subject to only a 20% tariff. We estimate our total tariff exposure is approximately 1 to 2% of our 11.5 billion dollar updated capex plan, prior to further mitigation by our team
- Our team successfully sold existing capacity length - available at both our utilities - into the recent MISO capacity auction resulting in meaningful benefits for our customers
- And, we are utilizing our individual customer rate construct in both states which allows us to capture growth from economic development activities occurring within our service territory which will, in turn, absorb a portion of our fixed costs helping mitigate costs for all customers in the future.

Turning to financings. In conjunction with our updated capital expenditure plans, we have updated our 20-25 through 20-28 financing plans. The anticipated financing sources for our 11 point 5 billion dollar capex plan are included on Slide 10. Cash from operations and anticipated proceeds from tax credit monetization make up almost 50 percent of our financing plan. New debt financing, net of maturities, accounts for approximately 40% while new common equity issuances account for approximately 12% of the total funding sources for the updated capital plan. We plan to launch an at the market or ATM program this year and continue our shareholder direct program – both of which support the new common equity issuances assumed in our plan. While our updated financing plans assumes raising the new common equity ratably during 20-26 through 20-28 we believe the ATM provides us flexibility on the timing as we continue to monitor and assess market conditions. With this updated financing plan, we are committed to maintaining our current investment grade credit ratings.

Tax credit monetization through transferability continues to provide benefits by reducing customer costs and providing an alternative source of financing for a portion of our capital expenditure plans. Along with the rest of the utility industry, we continue to monitor developments with different legislative proposals and advocate for legislative provisions that would be beneficial for our customers. We are also taking prudent actions to protect the right to transfer tax credits through our safe harboring activities. We have disclosed the success with these activities on Slide 10 of our supplemental slides which shows a substantial portion of the tax credits included in our updated financing plan through 20-28 are from projects either already in service or safe harbored prior to 20-25.

We also have optionality with alternative financing sources if transferability is modified under future legislation. Alternatives include incremental financing with a balanced mix of debt and equity as well as utilizing hybrid instruments. We would also evaluate aligning the timing of customer bill credits with the expected utilization of credits from future projects as well as the potential use of tax equity arrangements if beneficial for our customers.

Specific to our 20-25 debt financing plans. During the first quarter we extended the Alliant Energy Finance - variable rate term loan agreement until 20-26. The remaining debt financings are shown on Slide 11 and include estimated issuances at Alliant Energy Finance or the Parent, and our two utilities. For all three segments, we've increased our financing needs - primarily to fund the increased 20-25 investments in our updated capital plans and to increase financing flexibility in anticipation of the upcoming maturities in early 20-26. At our Iowa utility, some of the issuance will be used to refinance 300 million of debt maturing in the third quarter of this year.

Finally, I will highlight our regulatory initiatives that have been filed as well as those regulatory filings we plan to initiate later this year.

Starting in Wisconsin – WPL recently received approval from the PSCW for two customer focused investments in our updated capital plan including the Riverside Enhancement project to support reliability and resiliency for Wisconsin and the Bent

Tree Wind Refurbishment project expected to extend tax credits for the benefit of our customers.

Turning to regulatory proceedings currently in process, WPL recently filed an electric and gas rate review for test years 2026 and 2027. The filing includes recovery of several investments that support reliability and resiliency while keeping customer value and competitive rates top of mind. These investments include cost-effectively advancing responsible energy solutions including solar and wind refurbishment projects which provide zero-fuel cost energy and tax benefits - as well as - investing in new energy storage resources and capacity and efficiency upgrades of existing natural gas-fired generation to provide additional energy resources to meet growing customer demand. Finally, it includes recovery of our planned continued investments in electric and gas distribution to support reliability and safety for customers.

Next steps in the rate review process include a discovery phase and audit by the PSCW staff and interveners over the next few months, with hearing anticipated in early fall and a final decision expected from the PSCW later this year. More details on the rate review including key terms requested in this filing can be found on slide 12.

WPL also recently requested approval of an individual customer rate for the data center planned to be built in Beaver Dam, Wisconsin.

And lastly WPL has four active dockets in progress before the PSCW involving requests for certificates of authority for customer focused investments.

We also have four active filings in progress before the Iowa Utilities Commission including:

- A request for an individual customer rate for one of the new data centers in Cedar Rapids, Iowa,
- Requests for approximately 200 megawatts of battery storage to be located at the retired Lansing coal generation site and next to the Golden Plains wind generating station, and
- A request for an approximate 100-megawatt Cedar River natural gas generating station which would be located on the existing site of the Prairie Creek Generating Station.

The expected timing of decisions from the PSCW and IUC on these pending dockets is provided on slide 13

Finally, in conjunction with our updated capital expenditure plan, we also expect to make additional regulatory filings later this year in both Iowa and Wisconsin for renewable and dispatchable resources to enhance reliability, further diversify our energy resources and meet growing customer energy needs.

We thank you for your continued support and look forward to speaking with many of you in the coming months.

The accompanying conference call script includes forward-looking statements. These forward-looking statements can be identified as such because the statements include words such as “would,” “forecasted,” “plan,” “expected,” “believe,” “will,” “intention,” “expected,” “estimate,” “approximately,” “plans,” “anticipated,” “planned,” “expect,” or other words of similar import. Similarly, statements that describe future financial performance, including earnings guidance, earnings growth, long-term growth projections, and plans or strategies, including our capital expenditure and investment plans, financing plans, plans for load growth, and regulatory plans, are forward-looking statements. Such statements are subject to certain risks and uncertainties that could cause actual results to differ materially from those currently anticipated. Actual results could be affected by the following factors, among others:

- IPL’s and WPL’s ability to obtain adequate and timely rate relief to allow for, among other things, the recovery of and/or the return on costs, including fuel costs, operating costs, transmission costs, capacity costs, costs of generation projects including such costs that exceed initial estimates, deferred expenditures, deferred tax assets, tax expense, interest expense, capital expenditures, marginal costs to service new customers, and remaining costs related to electric generating units (EGUs) that have been or may be permanently closed and certain other retired assets, environmental remediation costs, and decreases in sales volumes, as well as earning their authorized rates of return, payments to their parent of expected levels of dividends, the impact of rate design on current and potential customers and demand for energy in their service territories, and the ability to obtain regulatory approval with acceptable conditions for individual customer rates for large load growth customers;
- the impact of IPL’s retail electric base rate moratorium;
- the ability to complete construction of generation and energy storage projects by planned in-service dates and within the cost targets set by regulators due to cost increases of and access to materials, equipment and commodities, which could result from tariffs, duties or other assessments, inflation, labor issues or supply shortages, the ability to successfully resolve warranty issues or contract disputes and the ability to obtain adequate generator interconnection agreements to connect the new projects to Midcontinent Independent System Operator, Inc. (MISO) in a timely manner;
- weather effects on utility sales volumes and operations;
- the direct or indirect effects resulting from cybersecurity incidents or attacks on Alliant Energy, IPL, WPL, or their suppliers, contractors and partners, or responses to such incidents;
- the impact of customer- and third party-owned generation, including alternative electric suppliers, in IPL’s and WPL’s service territories on system reliability, operating expenses and customers’ demand for electricity;
- economic conditions and the impact of business or facility closures in IPL’s and WPL’s service territories;
- the ability and cost to provide sufficient generation and the ability of ITC Midwest LLC and ATC LLC to provide sufficient transmission capacity for potential load growth, including significant new commercial or industrial customers, such as data centers;
- the ability of potential large load growth customers to timely construct new facilities, as well as the resulting higher system load demand by expected levels and timeframes;
- the impact of energy efficiency, franchise retention and customer disconnects on sales volumes and operating income;

- the impact that price changes may have on IPL's and WPL's customers' demand for electric and gas services and their ability to pay their bills;
- changes in the price of delivered natural gas, transmission, purchased electric energy, purchased electric capacity and delivered coal, particularly during elevated market prices, and any resulting changes to counterparty credit risk, due to shifts in supply and demand caused by market conditions, regulations and MISO's seasonal resource adequacy process;
- the ability to obtain regulatory approval for construction projects with acceptable conditions;
- the ability to achieve the expected level of tax benefits based on tax guidelines, timely in-service dates, compliance with prevailing wage and apprenticeship requirements, project costs and the level of electricity output generated by qualifying generating facilities, and the ability to efficiently utilize the renewable generation and energy storage project tax benefits to achieve IPL's authorized rate of return and for the benefit of IPL's and WPL's customers;
- the ability to utilize tax credits generated to date, and those that may be generated in the future, before they expire, as well as the ability to transfer tax credits that may be generated in the future at adequate pricing;
- federal and state regulatory or governmental actions, including the impact of legislation, regulatory agency orders and executive orders, and changes in public policy, including the potential repeal of the Inflation Reduction Act of 2022;
- disruptions to ongoing operations and the supply of materials, services, equipment and commodities needed to continue to operate and maintain existing assets and to construct capital projects, which may result from geopolitical issues, tariffs, supplier manufacturing constraints, regulatory requirements, labor issues or transportation issues, and thus affect the ability to meet capacity requirements and result in increased capacity expense;
- the impacts of changes in the tax code, including tax rates, minimum tax rates, adjustments made to deferred tax assets and liabilities, and changes impacting the availability of and ability to transfer renewable tax credits;
- inflation and higher interest rates;
- continued access to the capital markets on competitive terms and rates, and the actions of credit rating agencies;
- the future development of technologies related to electrification, and the ability to reliably store and manage electricity;
- employee workforce factors, including the ability to hire and retain employees with specialized skills, impacts from employee retirements, changes in key executives, ability to create desired corporate culture, collective bargaining agreements and negotiations, work stoppages or restructurings;
- disruptions in the supply and delivery of natural gas, purchased electricity and coal;
- changes to the creditworthiness of, or performance of obligations by, counterparties with which Alliant Energy, IPL and WPL have contractual arrangements, including large load growth customers, participants in the energy markets and fuel suppliers and transporters;
- the impact of penalties or third-party claims related to, or in connection with, a failure to maintain the security of personally identifiable information, including associated costs to notify affected persons and to mitigate their information security concerns;
- impacts that terrorist attacks may have on Alliant Energy's, IPL's and WPL's operations and recovery of costs associated with restoration activities, or on the operations of Alliant Energy's investments;
- changes to MISO's resource adequacy process establishing capacity planning reserve margin and capacity accreditation requirements that may impact how and when new and existing generating facilities, including IPL's and WPL's additional solar generation, may be accredited

with energy capacity, and may require IPL and WPL to adjust their current resource plans, to add resources to meet the requirements of MISO's process, or procure capacity in the market whereby such costs might not be recovered in rates;

- any material post-closing payments related to any past asset divestitures, including the transfer of renewable tax credits, which could result from, among other things, indemnification agreements, warranties, guarantees or litigation;
- issues associated with environmental remediation and environmental compliance, including compliance with all current environmental and emissions laws, regulations and permits and future changes in environmental laws and regulations, including the Coal Combustion Residuals Rule, Cross-State Air Pollution Rule and federal, state or local regulations for emissions reductions, including greenhouse gases, from new and existing fossil-fueled EGUs under the Clean Air Act, and litigation associated with environmental requirements;
- increased pressure from customers, investors and other stakeholders to more rapidly reduce greenhouse gases emissions;
- the timely development of technologies, innovations and advancements to provide cost effective alternatives to traditional energy sources;
- the ability to defend against environmental claims brought by state and federal agencies, such as the U.S. Environmental Protection Agency and state natural resources agencies, or third parties, such as the Sierra Club, and the impact on operating expenses of defending and resolving such claims;
- the direct or indirect effects resulting from breakdown or failure of equipment in the operation of electric and gas distribution systems, such as mechanical problems, disruptions in telecommunications, technological problems, and explosions or fires, and compliance with electric and gas transmission and distribution safety regulations, including regulations promulgated by the Pipeline and Hazardous Materials Safety Administration;
- issues related to the availability and operations of EGUs, including start-up risks, breakdown or failure of equipment, availability of warranty coverage and successful resolution of warranty issues or contract disputes for equipment breakdowns or failures, performance below expected or contracted levels of output or efficiency, operator error, employee safety, transmission constraints, compliance with mandatory reliability standards and risks related to recovery of resulting incremental operating, capacity, fuel-related and capital costs through rates;
- impacts that excessive heat, excessive cold, storms, wildfires, or natural disasters may have on Alliant Energy's, IPL's and WPL's operations and construction activities, and recovery of costs associated with restoration activities, or on the operations of Alliant Energy's investments;
- Alliant Energy's ability to sustain its dividend payout ratio goal;
- changes to costs of providing benefits and related funding requirements of pension and other postretirement benefits plans due to the market value of the assets that fund the plans, economic conditions, financial market performance, interest rates, timing and form of benefits payments, life expectancies and demographics;
- material changes in employee-related benefit and compensation costs, including settlement losses related to pension plans;
- risks associated with operation and ownership of non-utility holdings;
- changes in technology that alter the channels through which customers buy or utilize Alliant Energy's, IPL's or WPL's products and services;
- impacts on equity income from unconsolidated investments from changes in valuations of the assets held, as well as potential changes to ATC LLC's authorized return on equity;

- impacts of IPL's future tax benefits from Iowa rate-making practices, including deductions for repairs expenditures and cost of removal obligations, allocation of mixed service costs and state depreciation, and recoverability of the associated regulatory assets from customers, when the differences reverse in future periods;
- current or future litigation, regulatory investigations, proceedings or inquiries;
- reputational damage from negative publicity, protests, fines, penalties and other negative consequences resulting in regulatory and/or legal actions;
- the direct or indirect effects resulting from pandemics;
- the effect of accounting standards issued periodically by standard-setting bodies; and
- the ability to successfully complete tax audits and changes in tax accounting methods with no material impact on earnings and cash flows.

Without limitation, the expectations with respect to 2025 earnings guidance, 2024-2028 capital expenditures guidance, long-term earnings growth objective, financing plans, regulatory plans and growth associated with data centers in this script are forward-looking statements and are based in part on certain assumptions made by Alliant Energy, some of which are referred to in the forward-looking statements. Alliant Energy cannot provide any assurance that the assumptions referred to in the forward-looking statements or otherwise are accurate or will prove to be correct. Any assumptions that are inaccurate or do not prove to be correct could have a material adverse effect on Alliant Energy's ability to achieve the estimates or other targets included in the forward-looking statements. The forward-looking statements included herein are made as of the date hereof and, except as required by law, Alliant Energy undertakes no obligation to update publicly such statements to reflect subsequent events or circumstances.
